

How Boston University Uses Oracle on Linux to Exploit its IBM System z with Open Systems and Open Standards

Gerard C. Shockley
Boston University

Tuesday March 03, 2009 16:30
Session 9275

Agenda

- IBM System z
 - Oracle & IBM Partnership
 - System Z Evolution and Oracle
 - Resources
- Boston University
 - Business Challenges
 - Solution
 - The Business Value Gained
 - Future Directions

Oracle and IBM Partnership

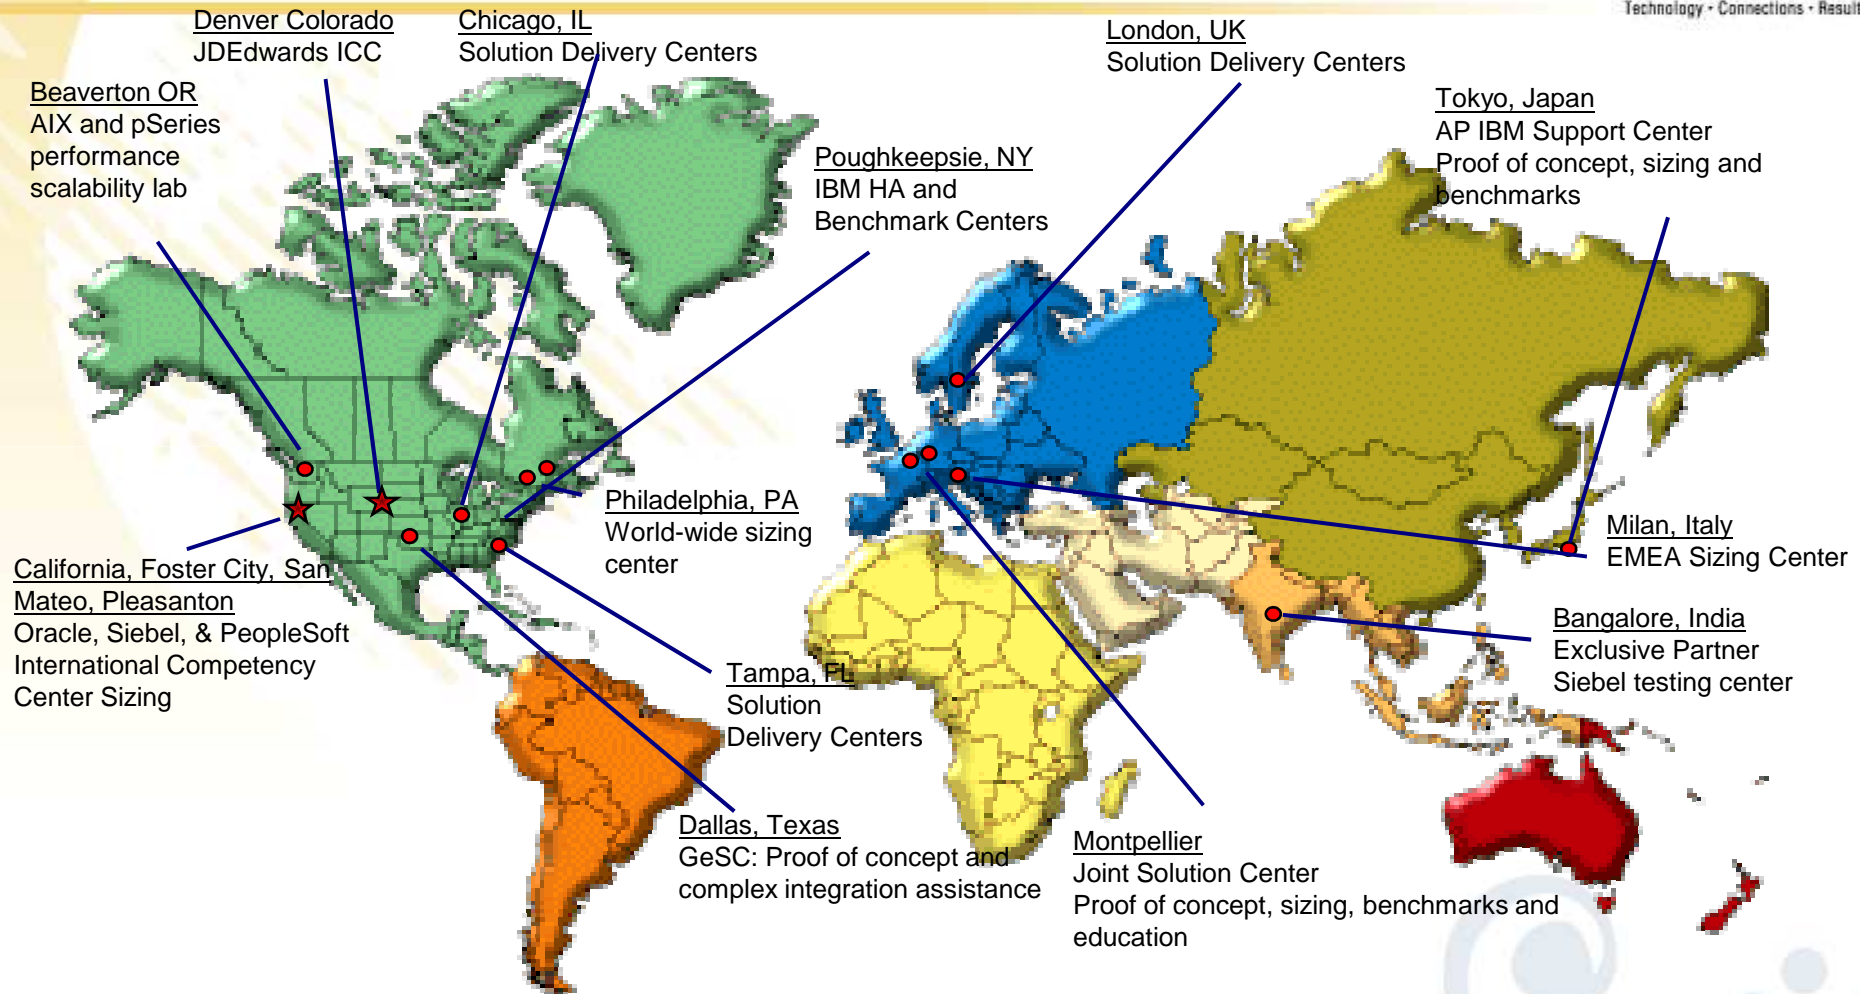

Working Together for your Success

- **Sustained Partnership for over 21 years**
 - Over 17,000 Worldwide Joint Application Customers
- **Joint Technology Relationship – Covering Systems z, p and x**
 - Joint Solution Center – Staffed by Oracle and IBM IT Specialists and Architects
 - Dedicated Team of Oracle and IBM Architects to Develop Best Practices for High Availability for Oracle Deploying on IBM Platforms
 - Dedicated Resources to Engage Customers in Design, Proof of Concept and Benchmark Activities
 - Dedicated IBM Competency Center (ICC) IBM Level 3 Tech Support located at Oracle HQs
- **Joint Processes in Place to Align Technical Support Teams**
 - To Simplify Problem Resolution

IBM Centers Supporting Oracle

System z Evolution for Oracle

S H A R E
Technology • Connections • Results

z *was* a central host mainframe

“System z is a database hosting platform to consolidate single image Oracle database Unix servers...”

z *is* a server on the Oracle Grid

“System z is a high-availability database server platform that provisions virtual Linux servers to the Oracle Grid...”

Linux On System z

Data Serving Excellence for the Oracle Grid

S H A R E
Technology • Connections • Results

- Virtualization
 - Near 100% Utilization, near 100% of the time
- Availability
 - Built in across the system
- Security
 - Industry leading security capabilities
- Scalability
 - Virtual servers provisioned in seconds
 - Additional capacity available on demand
- Improved Economics
 - Lower cost per transaction
 - Lower labor costs
 - Lower energy costs

Our Business Challenges

- Economic Factors
 - Initial and ongoing Software Costs
 - Project Costs - Staying within Budget
 - System Maintenance Costs
 - Staff Management Overhead
 - Support Costs - with Reduced Resources
- Technical Factors
 - Agile high-available infrastructure for applications
 - Availability and Service Level Adherence
 - Decentralized Server Management
 - Maintaining Strong Security Models
 - Reduce Project Life Cycle Times & Delivery
 - Complicated Disaster Recovery Procedures
- Environmental Factors
 - Effective Scalable Power Consumption

Our Objective

- Standards-Based Infrastructure
 - Highly Available
 - Integrated
 - Simplified
 - Secure

Always on-line

Solution Strategy: Standardize

- Business Driver: Simplify
 - Linux Virtual Machines as a best practice configuration
 - Oracle Grid Infrastructure - Centralize server management
 - Linux Operating System – Open platform
 - IBM System z – Oracle data server

Solution Strategy: Virtualize

- Business Drivers: Reliability, Availability, Service, Scalability, Security
 - Oracle Maximum Availability Architecture (MAA) with System z
 - Dynamically add and manage disk (Oracle ASM)
 - Centralized backup and recovery of Oracle databases (Oracle RMAN)
 - Protect data from failures, disasters, errors, and corruptions (Oracle Data Guard)
 - Ensure High Available systems (Oracle RAC)
 - Acquire resources once use many (IBM zVM server virtualization)
 - Native high-speed support for internal data flows (IBM z Hipersockets)
 - Point in Time Back-up (IBM Systems z feature)
 - Linux virtual server monitoring and capacity planning (Velocity ESALPS)
 - Remote read/support configuration (Metalink Credential Configuration)
 - Automated systems management (LoZ, Oracle Grid)

Solution Strategy: Consolidate

- Business Driver: Operational Efficiency & Cost Reduction
 - Single guests running multiple Oracle applications
 - Distributed servers to z virtual servers
 - Consolidate database systems to Oracle Database
 - Database administration oracle-help mailing list

BU Applications

BU Applications

- **Business Intelligence BU-DAR (PROD 10/2007)**
 - Data Warehouses built for client data.
 - Oracle Warehouse Builder and database replication with Java – XML utilities.
 - More projects in the active project list.
- **OpenSource Oracle Database Projects**
 - Coeus – MIT Grant contract management system (POC)
- **University Document Imaging (PROD 10/2008)**
 - Scanning, retrieval, workflow
 - Onbase System Selected
 - Target Oracle 10G
 - Enterprise Wide System (5 Intel front ends)
 - Stress showed good performance – Optimizing dynamic queries
 - Platform Integrated with zOS system

BU Applications

- **Java Enterprise Edition Project (PROD 2005)**
 - Student Graphics Scheduler – Student Schedule Matrix - *Very successful*
 - BUCHART – Faculty charting tool
 - Schedule Servlet – Student Course schedule matrix
 - ID-Sync Project – Quartz Scheduler, Hibernate JDBC interface
 - IBM HostOnDemand – Java Servlet Emulation Client
- **DB2 zLinux PhotoID project – Universal ID (PROD 2004)**
 - All Students , Faculty, Staff have a Universal ID

BU Applications

uPortal – uPortal.org (PROD 2005)

Java Based OSS Portal

Built by JASIG.org Java Open Source Project

1st System z Linux Environment for uPortal planet wide

Business Drivers

Community supported direction – Similar challenges

Need for high volume transaction processor for Linux – BlueGeneL used for workload simulations

We Installed Tomcat 5.0 – Open Source Application server

<http://jakarta.apache.org/tomcat/index.html>

Catalina project – Servlet 2.3 and JSP 1.2 specification

OSS Database Server environment (PostgreSQL)

Success Strategies

Involve all appropriate internal organizations – early and frequently

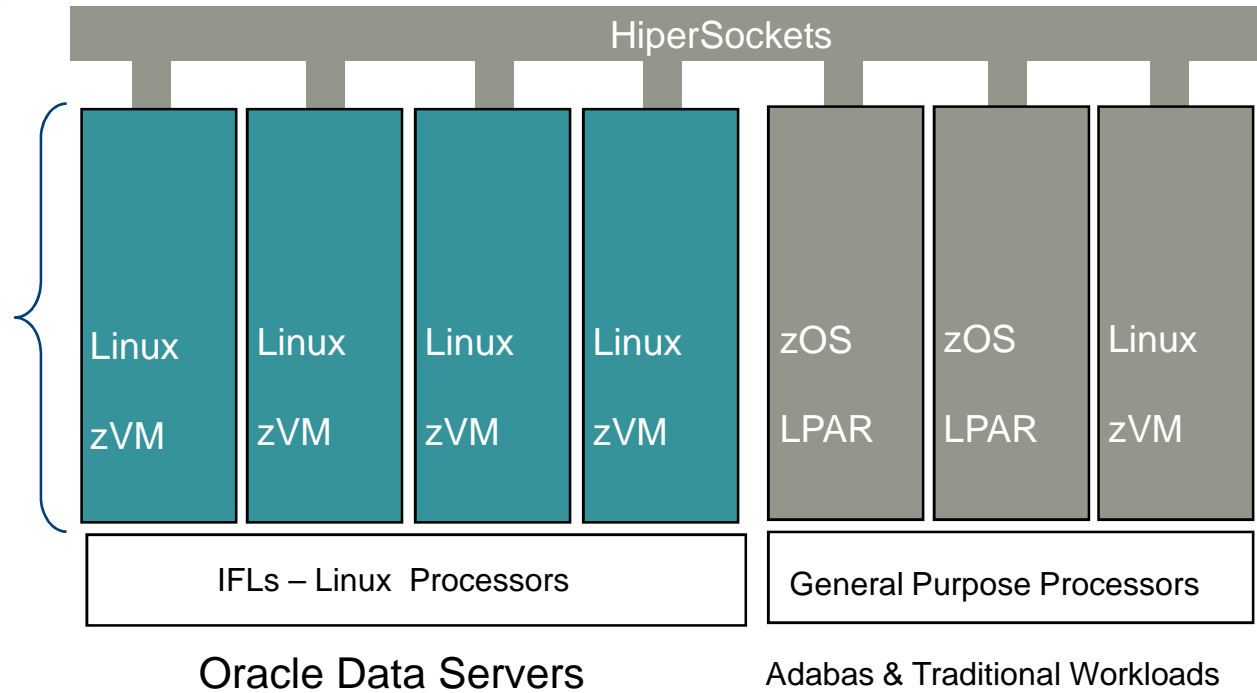

Secure appropriate external support organizations – we use Sine Nomine

<http://sinenomine.net/> 24x7

Oracle Grid Infrastructure for Applications

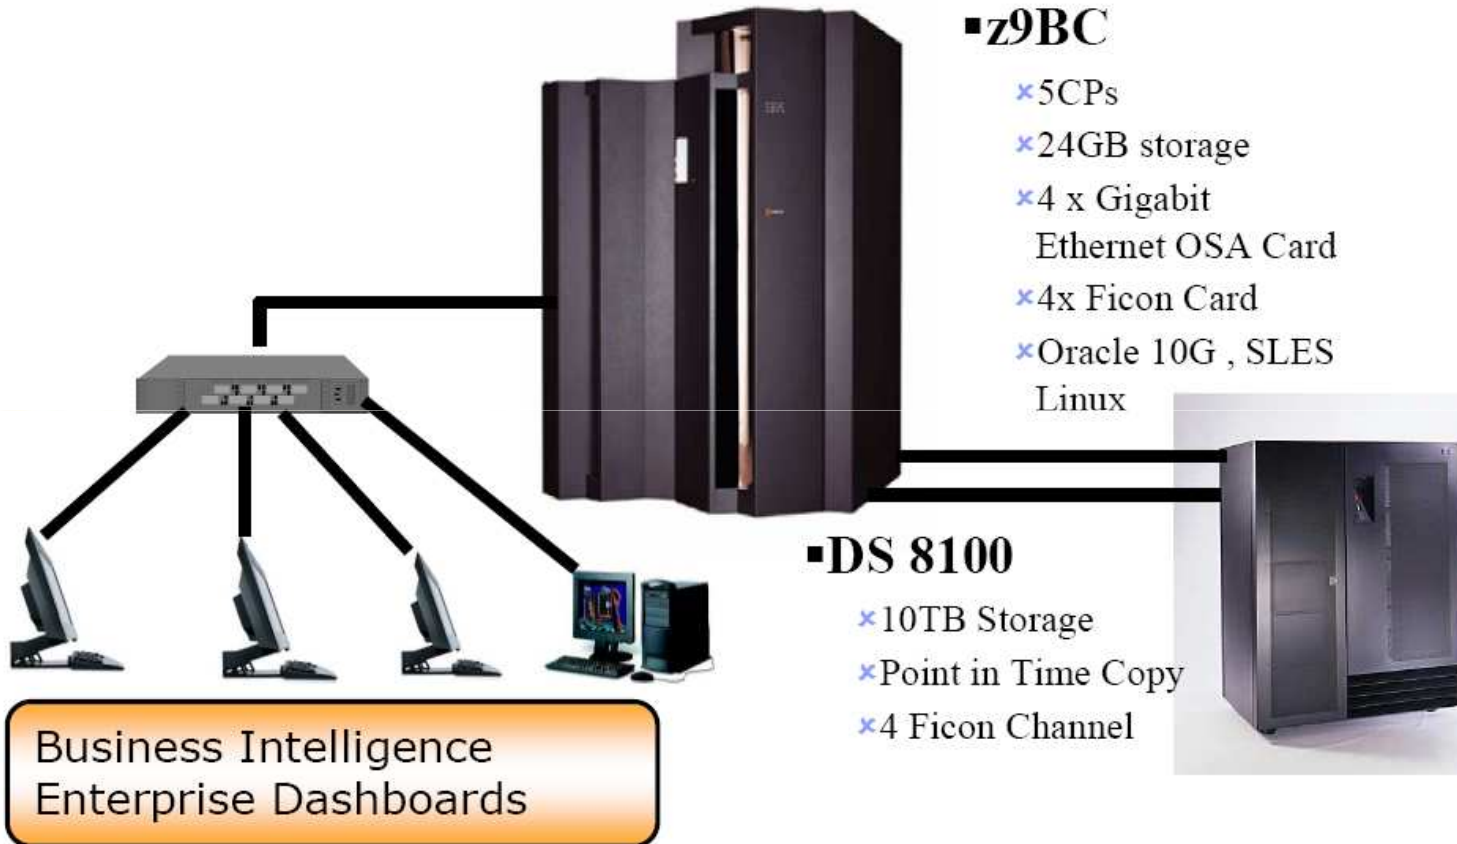

Oracle Grid Control

Hardware Infrastructure

SHARE
Technology • Connections • Results

▪z9BC

- ×5CPs
- ×24GB storage
- ×4 x Gigabit Ethernet OSA Card
- ×4x Ficon Card
- ×Oracle 10G , SLES Linux

▪DS 8100

- ×10TB Storage
- ×Point in Time Copy
- ×4 Ficon Channel

BU uPortal Configuration
High Availability Proposal
05/2007

The Business Value Oracle Grid and MAA with System z

- Standardized – Reduced Complexity
 - Simplified IT Operations by reducing manual build efforts
 - Simplified Software Systems for Staff, Faculty and Students resulting in streamlined decision support improvements
- Virtualized – Provided Maximum Availability
 - Improved Applications Availability
 - Improved Quality of Service “Uptime” by using MAA
 - Continuous Data Availability
- Consolidated – Reduced Costs
 - Improved Operational Efficiency via n-Tier environment

The Future at BU

- Oracle & IBM Joint Solutions Center
 - Evaluate IBM JSC z Lite Testing and recommendation to peers
- Future Initiatives
 - Continue Complete Exploitation of MAA
 - Enterprise Grid monitoring
 - Develop High Availability Application Offerings (RAC,ASM)
 - Integrate New BU Business Systems with MAA mindset
 - Institutional Research Runtime Environment

Resources

- Solution Design
 - Oracle Sales Development – System z
 - Matt Puccini matthew.puccini@oracle.com
 - Oracle/IBM Joint Solution Center
 - IBM System z Solution Specialists
 - Gaylan Braselton gbrasel@us.ibm.com
- Solution Testing
 - Oracle z Lite – pre-configured Oracle/System z environment
