# Enterprise Linux on S/390 and eServer zSeries Platforms

**David N. Mastrobattista**  
*Senior Industry Analyst*

**August 8, 2001**

# Agenda

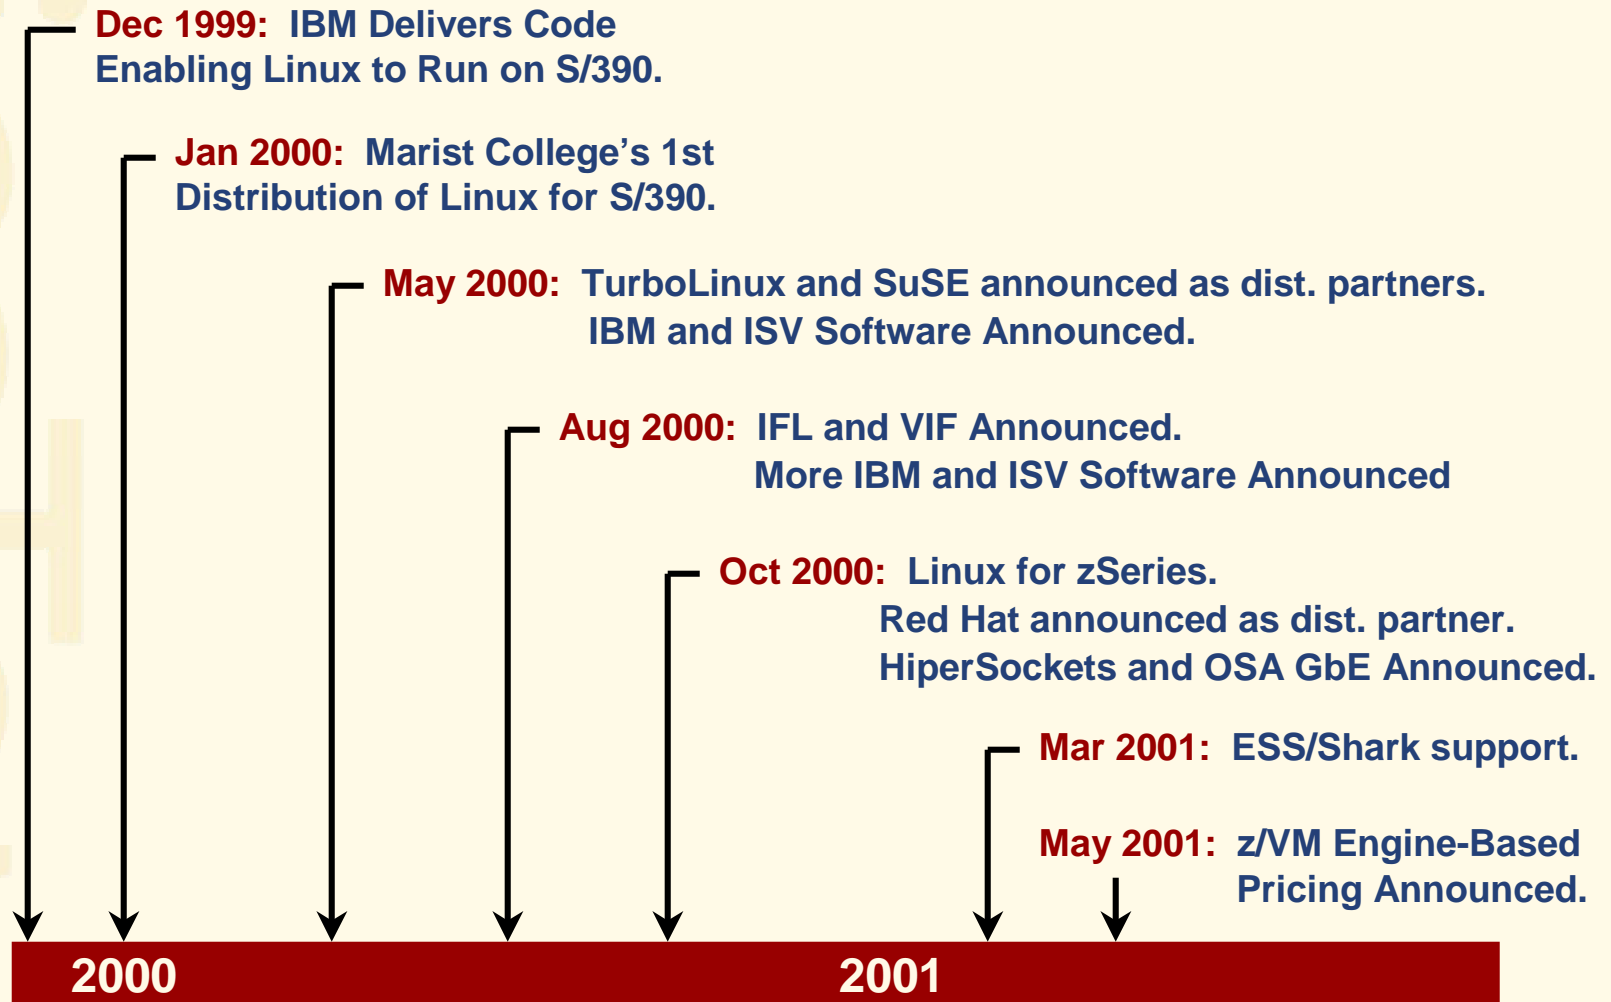

---

Linux  
for S/390

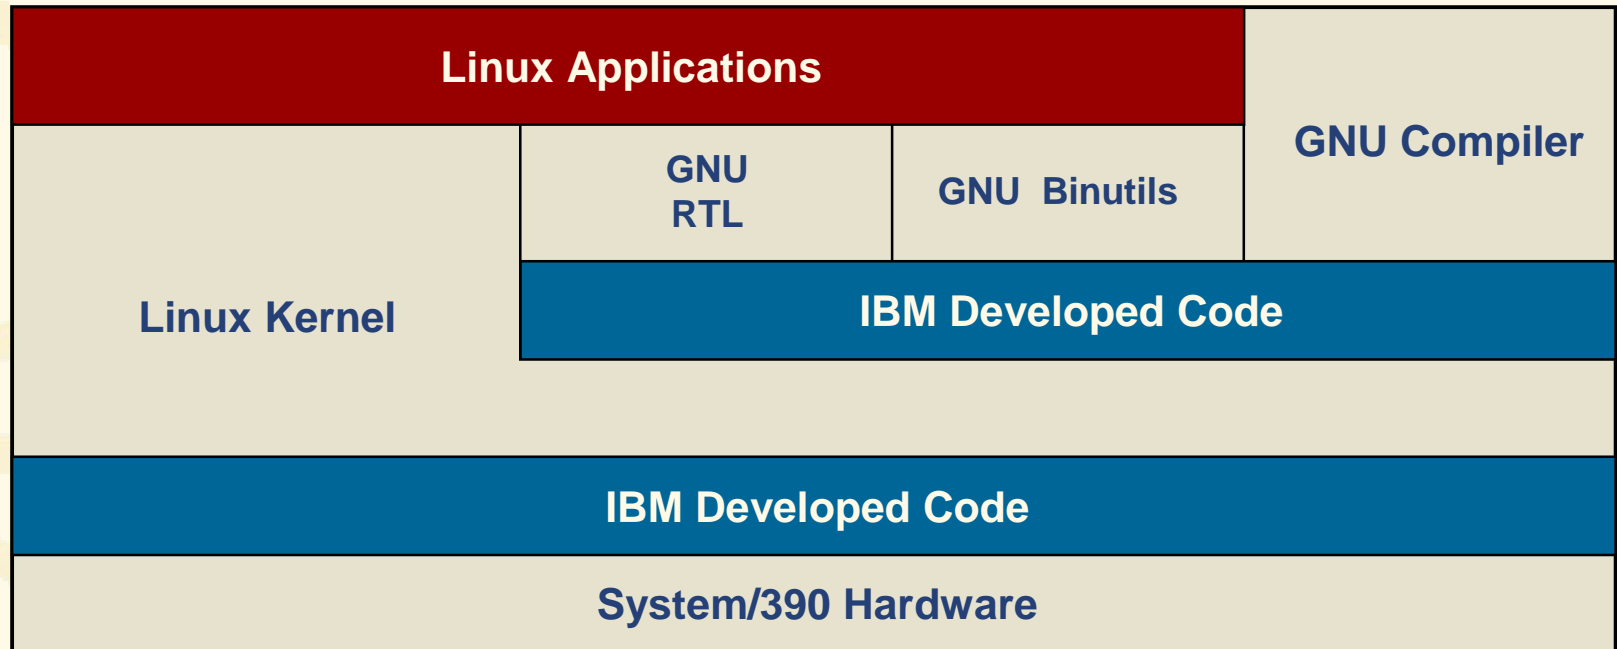

- Why all the excitement with Linux on the mainframe?
- Linux distributions and IBM distribution partners
- Real-world mainframe Linux scenarios update
- Software considerations:
  - ✓ New z/VM software pricing
  - ✓ ISV software and trends
- Summary and recommendations

# A Brief Timeline for Mainframe Linux

# What Is Linux for S/390 and zSeries?

# What Is Linux for S/390 and zSeries?

|              | Total Lines<br>of Code | S/390 Enabling<br>Code | Percentage of<br>S/390 Code |
|--------------|------------------------|------------------------|-----------------------------|
| Linux Kernel | 2,200,000              | 45,000                 | 2.05%                       |
| gcc          | 1,700,000              | 9,000                  | 0.53%                       |
| gdb          | 1,500,000              | 8,000                  | 0.53%                       |
| glibc        | 1,200,000              | 5,000                  | 0.42%                       |
| binutils     | 800,000                | 6,000                  | 0.75%                       |
| strace       | 41,000                 | 200                    | 0.49%                       |

Source: IBM

- Pure Linux, ASCII Environment.
- Not a unique version of Linux.
- Exploits IBM S/390 Hardware, including IEEE floating point.
- No intention to replace z/OS or other S/390 operating systems.

# Convergence of Two Computing Technologies

+

- Complete platform independence.
- Increasing application portfolio.
- Readily ported Unix/NT infrastructure functionality (i.e., Web server, DNS, firewall, e-mail, message collaboration).
- Mainstream / University supply of highly skilled programmers.

- Best platform for reliability and continuous availability.
  - ✓ Error detection and correction.
  - ✓ Remote diagnostics and “call-home”.
  - ✓ Concurrent firmware maintenance.
  - ✓ Dynamic CPU / channel sparing.
  - ✓ Memory patrol and chip sparing.
- Dynamic workload LPAR management.
- VM virtual server management.
- Supports horizontal and vertical scaling.

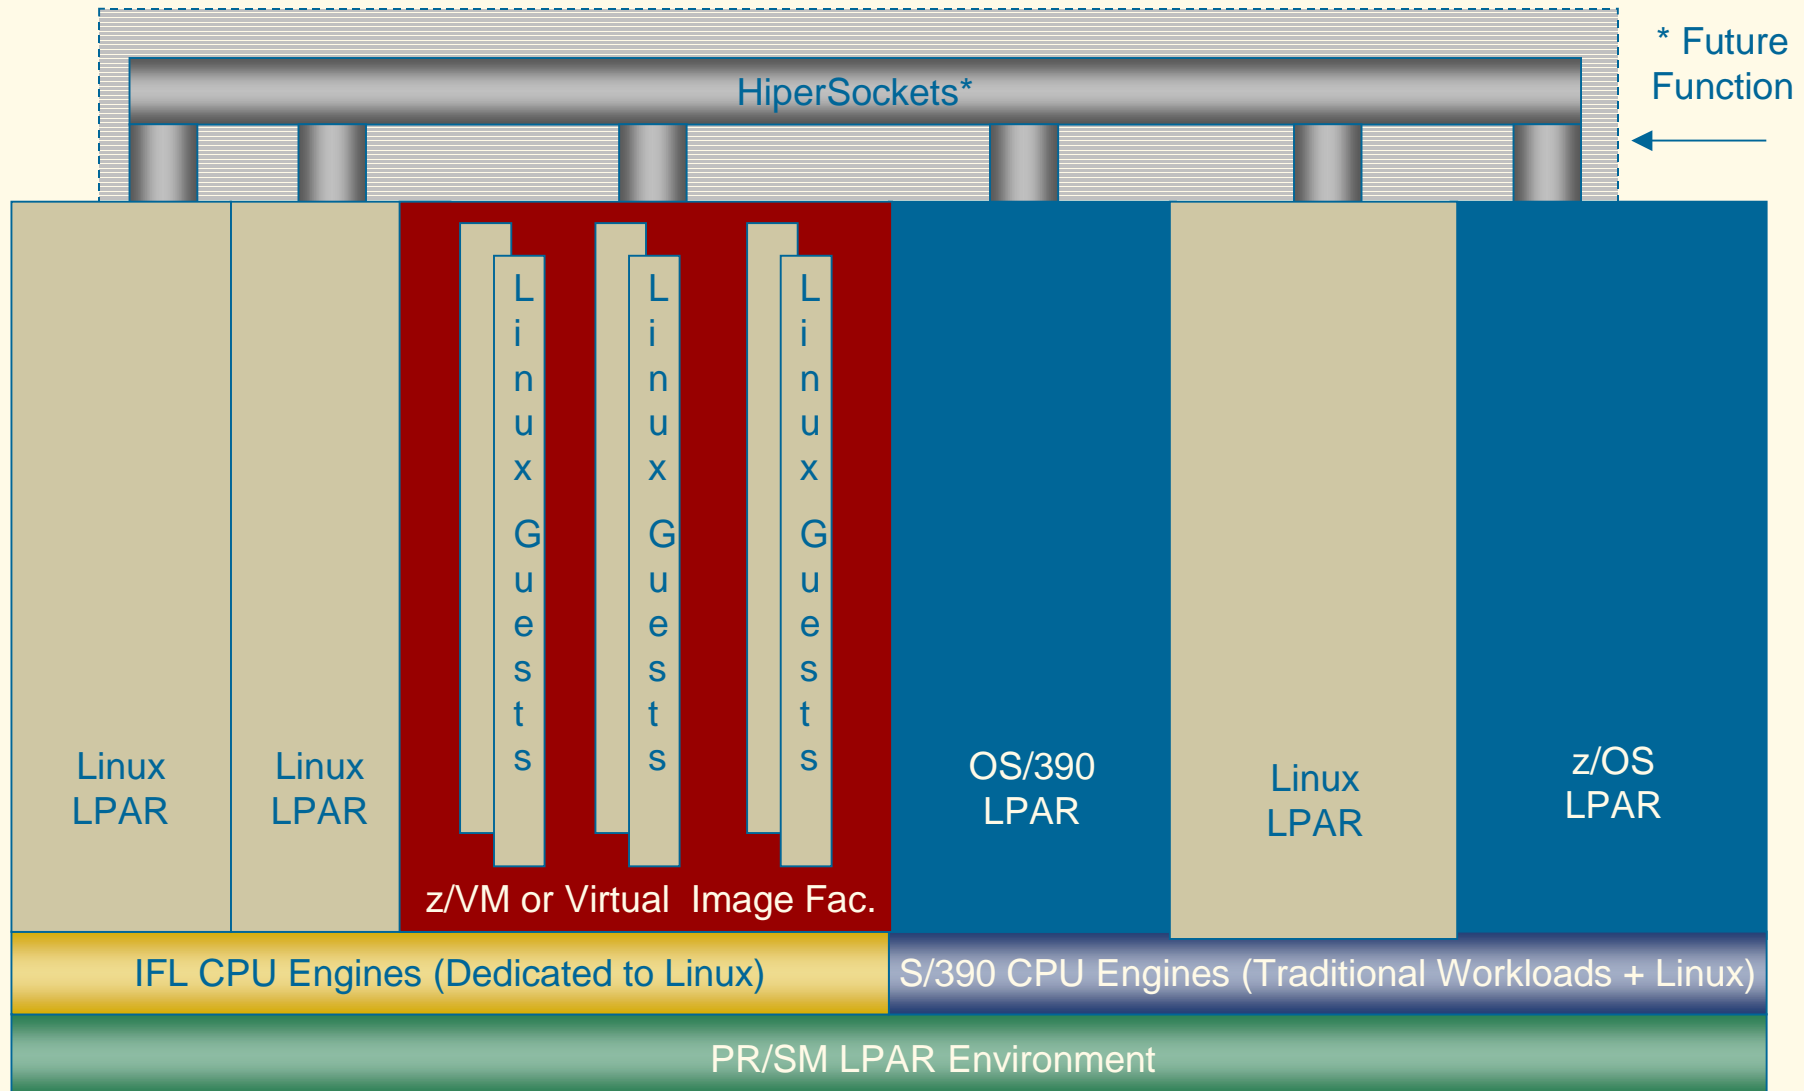

***Industrial Strength  
Linux Environment***

***&***

***Potential for Highly  
Integrated E-Business  
Solutions***

# Mainframe Linux Implementation Options

# IBM Linux Distribution Partners

---

## SuSE

- GA Release in Nov 2000.
- Based on 2.2.16 Kernel.
- Available via download and CDs.
  - Largest selection of software packages for an S/390 distribution.
- Professional services available for installation, training, customization and support.
- YaST: Set-up tool and admin.
- Supports Logical Volume Manager.
- Currently, the only trouble-free distribution that supports Websphere for Linux 3.5 AE.

# IBM Linux Distribution Partners (cont'd)

---

## TurboLinux

- GA Release in October 2000.
- Based on 2.2.16 Kernel.
- Available via download and CD.
- V6.0 for zSeries and S/390 — Available Jan 2001 (No LVM Support).
- V6.5 Alpha Release — Available June 2001 (with LVM Support).
- Script-based installation process.
- Professional services available for installation, training, customization and support.

# IBM Linux Distribution Partners (cont'd)

---

## Red Hat

- Beta Release in Feb 2001. No GA Release Yet.
- Releases based on 2.2.19 kernel and 2.4.3 kernel.
- Currently only available via download.
- Incorporates more recent glibc modules (v2.2) that don't coexist well with DB2.
- No Logical Volume Manager support.
- Professional Services available.

## Caldera

- Currently no S/390 or zSeries distribution available — only xSeries.

# Other Mainframe Linux Distributions

---

## Marist College

- First available S/390 Linux offering — Jan 2000.
- Latest release (May 2001) based on 2.2.16 Kernel.
- Technically NOT a distribution, but rather a copy of a running Linux system.
  - Advantages:
    - Easy installation.
    - Relatively small compared to other distributions.
    - Requires little knowledge of Linux/390.
  - Disadvantages:
    - Can't select software packages to install.
    - No system administration tool.

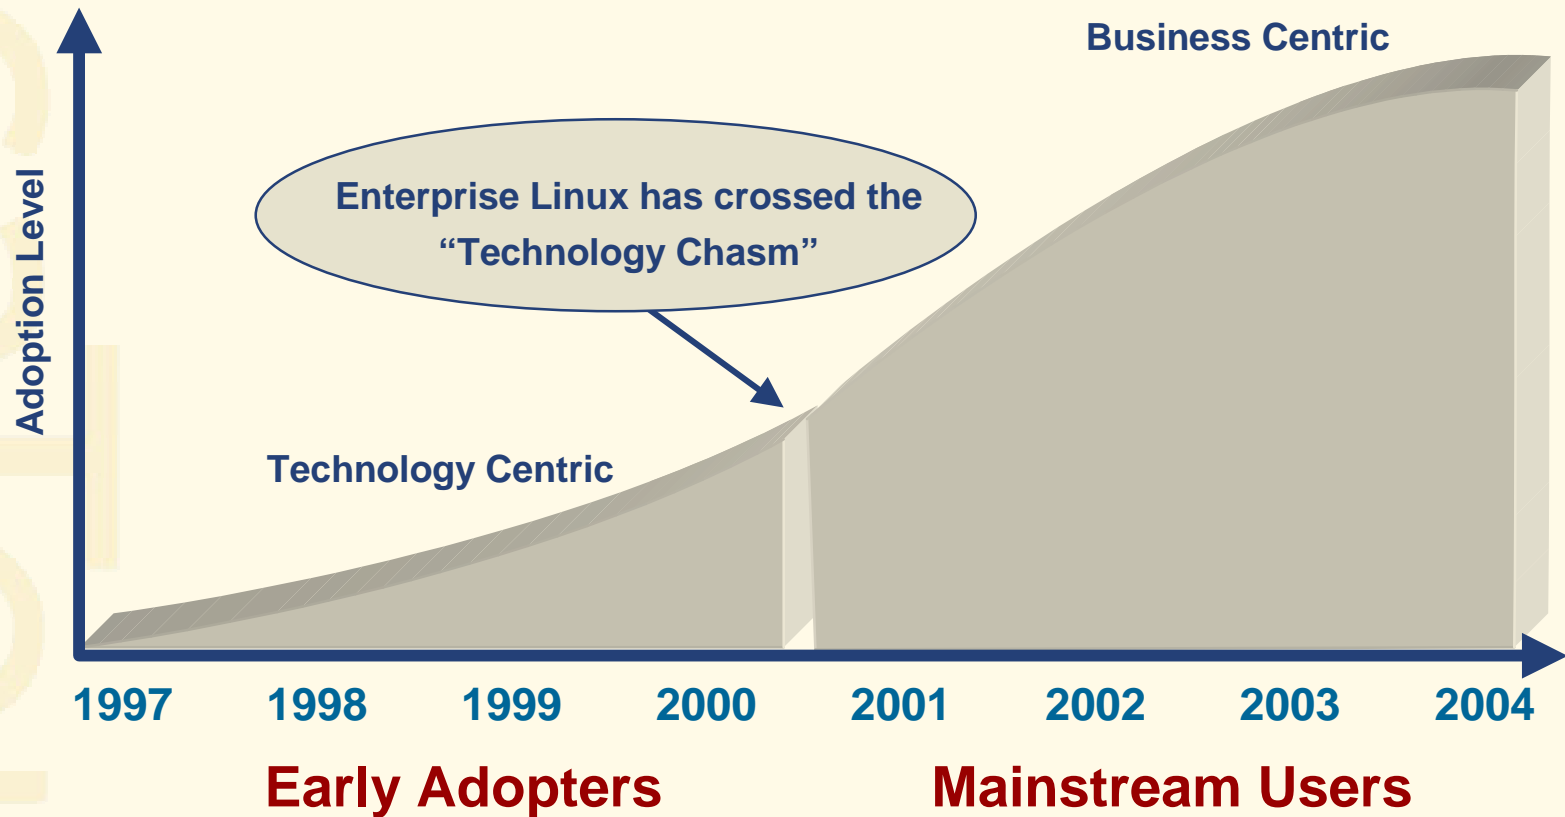

# Other Mainframe Linux Distributions (cont'd)

---

## Think Blue 64 Linux for zSeries

- Distributed by Millenux (Germany).
- Provided second S/390 Linux offering after Marist College.
- Provides 31-bit (Linux for S/390) and 64-bit (Linux for zSeries).
- First available 64-bit Linux for zSeries.
  - Based on 2.4.3 Kernel.
- Supports Logical Volume Manager.
- Professional Services available.

# Technology Adoption Curve... And Linux

# Typical Customer Profiles ...

---

- Current S/390 or eServer zSeries customer
  - Used VM in the past. Now it's back!
  - Never used VM. Installing VM for the first time.
    - VIF
    - z/VM
  - Likely to use Integrated Facility for Linux (IFL) feature.
  - Some may elect special “G6 Linux-only” offering.
- New to System/390
  - Likely to use Multiprise 3000 or special “G6 Linux-only” offering.

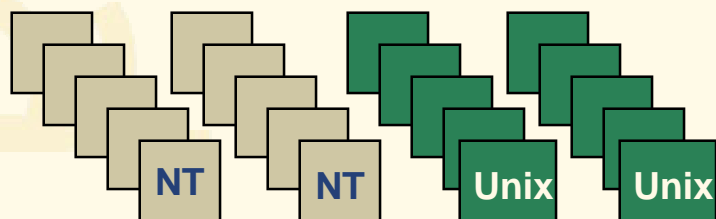

# Initial Linux Customers and Workloads

|  | IDC / Netgen Customers   | Enterprise Customers / Vendors  |
|--|--|---|
| Infrastructure Server Consolidation      | <ul style="list-style-type: none"><li>• Telia Telecom ISP</li><li>• CSK Networks</li></ul> | <ul style="list-style-type: none"><li>• Banco Mercantile</li><li>• Rubbermaid</li><li>• Grede Foundries</li><li>• Wall Street Firms</li></ul>   |

# Server Consolidation

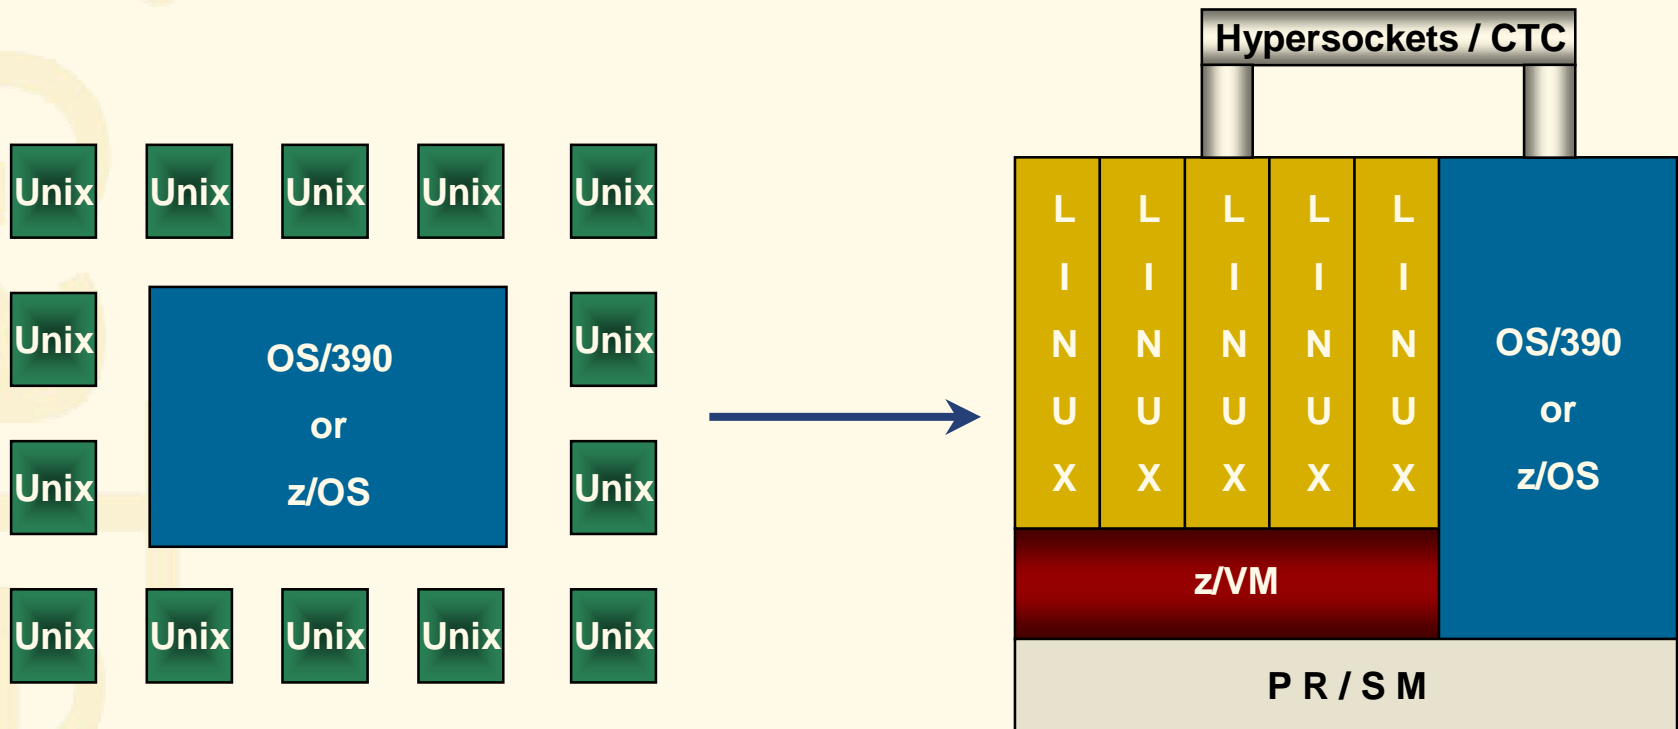

## Single-Function Internet Servers

- File / Print Servers
- Web Servers
- DHCP, DNS Servers
- Internet News Servers
- Mail Servers

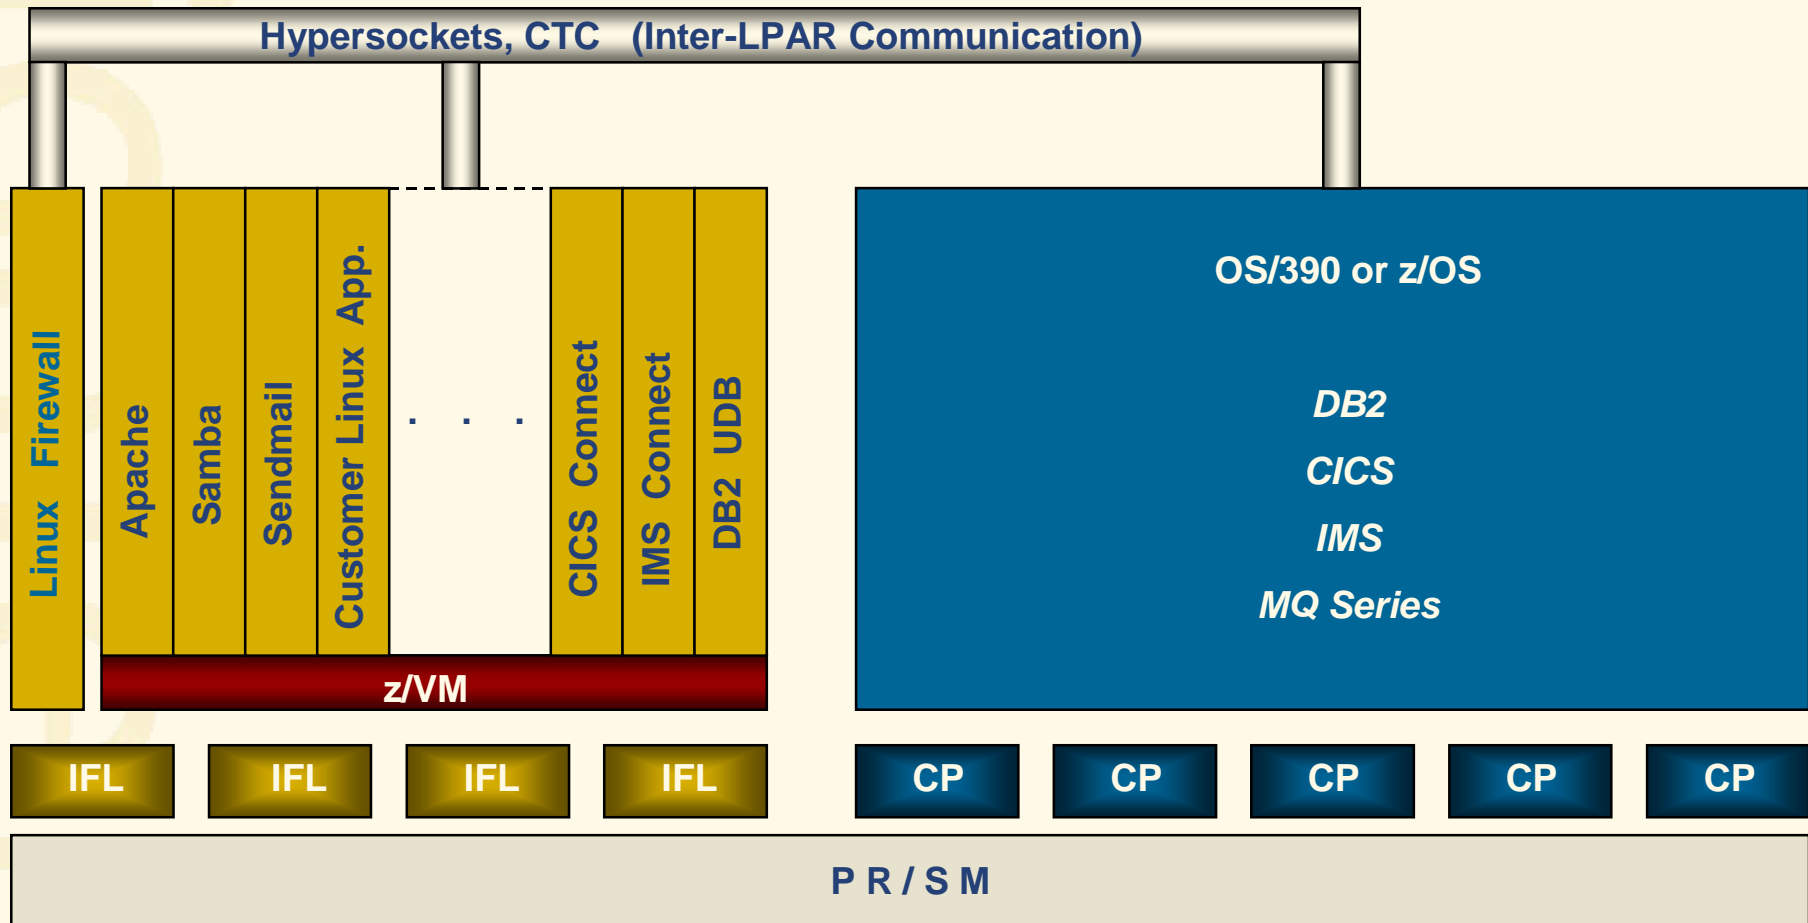

# Linux and z/OS Hybrid Solutions

- Consolidation of Mid-Tier Unix Servers
- Leverage z/OS Data Server “Back-End”
- Bring Application Server Function Closer to DB Function

# Linux and z/OS Hybrid Solutions (cont'd)

# New z/VM 4.1 Engine-Based Pricing — zSeries

# Linux Software ... IBM and ISV

---

- Many IBM middleware products available now.
  - Most Tivoli products are under evaluation — (TBD).
  - BMC — Patrol, systems management.
  - CA — systems management
  - Compuware — most products have SOD.
  - SAP — ERP products, mySAP.com support.
  - Software AG — database products
- 
- Bynari — messaging / collaboration software (GA).
  - SendMail — e-mail / messaging (early-ship status).
  - Sanchez — core banking software (field-test / beta).
  - UTS Global — international porting center for Linux/390.

# Summary and Recommendations

---

- Key Mainframe Linux opportunities in the enterprise:
  - Hardware economies of scale
    - Look for more than 50 Intel or “low-end” Unix servers.
    - Watch for aggressive plans for departmental server growth.
  - Workload consolidation
    - Reduced total cost of ownership.
    - Better resource utilization.
    - Improved time-to-market, speed of deployment.
  - Application integration
    - Consolidate middle tier of Unix application servers.
    - Leverage z/OS database server capabilities and quality of service.
  - Distributed enterprise model
    - Central management of geographically dispersed, replicated servers.

# Summary and Recommendations (cont'd)

---

- Choose a Linux distribution partner carefully.
  - Include the following criteria:
    - Stability / reputation of the vendor.
    - Solid maintenance plan(s).
    - Possible installation and training, if you're currently low on Linux expertise.
    - Track record with current mainframe Linux middleware and applications.
- For existing S/390 customers with little excess mainframe capacity, explore the IFL route for additional CPU engines.
  - Keeps OS/390 and z/OS software costs stable.
  - Alternative is a small, stand-alone G5/G6 system.

# Summary and Recommendations (cont'd)

---

- For new S/390 customers, explore IBM's "G6+Linux" special offering.
  - Alternative is a Multiprise 3000 system.
- If you're going to use VM to seriously manage your Linux environment, use z/VM.
  - VIF is a streamlined VM, lacking many of z/VM's performance and system management capabilities.
  - VIF will not be enhanced beyond its initial offering.
- 64-bit Linux distributions — based on the 2.4 kernel — are just now becoming available.
  - Let them stabilize before undertaking a serious implementation.
- 31-bit Linux distributions — based on the 2.2.16-19 kernels — appear much more stable at this time.

# Stay Tuned...
