Business Transformation and IT

IBM Transformation:  
Enterprise Computing Model Update

Bill Reeder

[breeder@us.ibm.com](mailto:breeder@us.ibm.com)

Linux and Virtualization Architecture and Strategy

August 2009

## IBM Transformation – Enterprise Computing Model Update

- § IBM Business Transformation and IT
- § Enterprise Virtualization Progress
- § IBM Optimization Services
- § Lessons Learned Summary

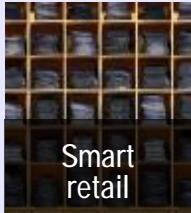

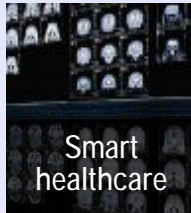

# IBM Strategy and Values

**Focus on open technologies and high-value solutions**

**Deliver integration and innovation to clients**

**Become the premier Globally Integrated Enterprise**

## ... Building a Smarter Planet

-  Our world is becoming **INSTRUMENTED**.
  -  Smart traffic systems
  -  Smart food systems
-  Our world is becoming **INTERCONNECTED**.
  -  Smart supply chains
  -  Smart energy grids
-  All things are becoming **INTELLIGENT**.
  -  Smart retail
  -  Smart healthcare

IBMers Value

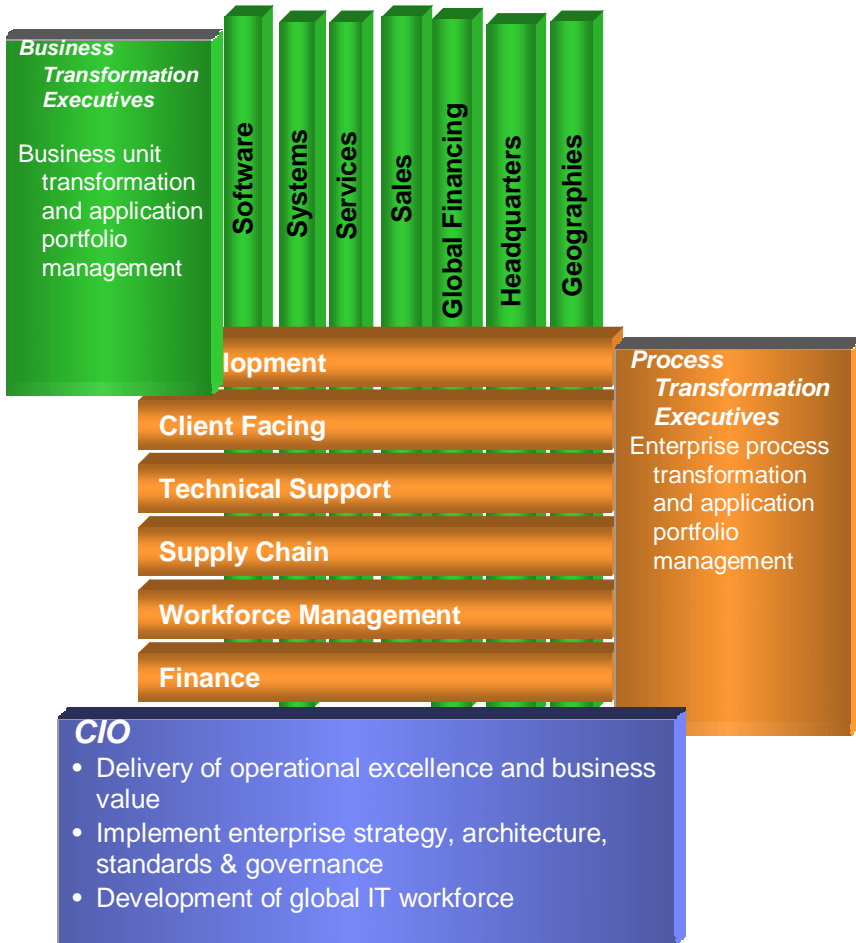

Dedication to every client's success.  
Innovation that matters—for our company and for the world.  
Trust and personal responsibility in all relationships.

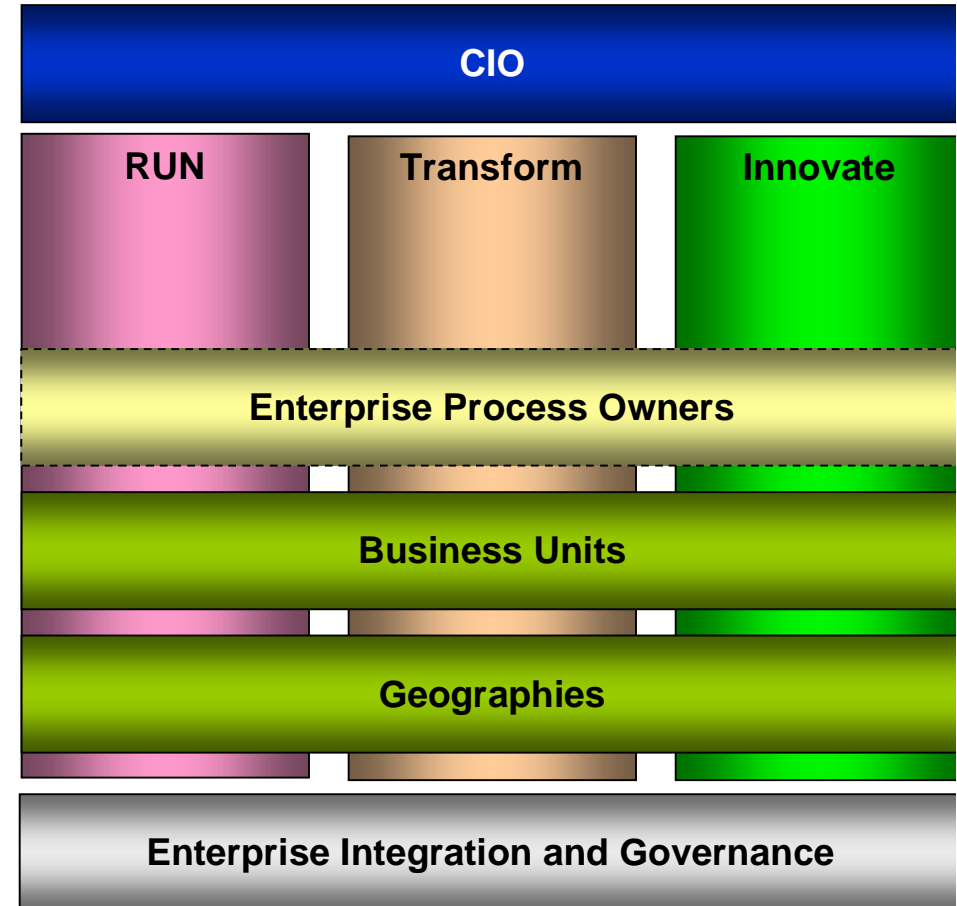

# A single CIO organization supports IBM's business strategy

**Federated Model**

**Single CIO Organization**

## IBM's own Transformation Experience

### IBM IT Transformation

- IBM's focus on IT enablement has allowed IBM to reduce IT spending by \$1.5 Billion in the past 5 years

### Data Center Efficiencies Achieved

- Consolidation of infrastructure, applications
- Optimize resources, Globally Integrated Enterprise

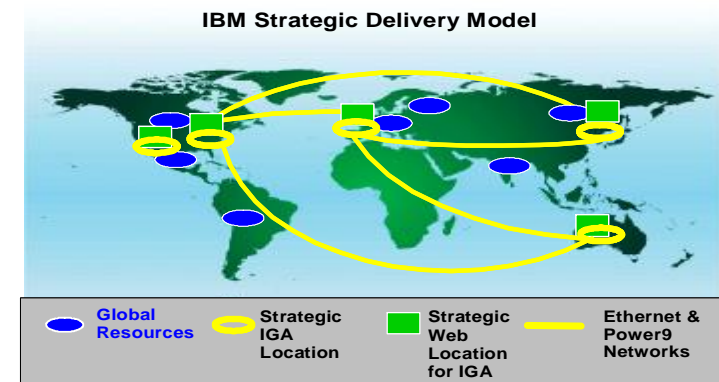

### Next Level of Infrastructure Challenge

- Floor space, underutilized and outdated assets
- Continued infrastructure cost pressure
- Increase % IT spending to transformation initiatives

### Dynamic Infrastructure for a Smarter Planet

- Simplified – rationalized and consolidated
- Standardized – service catalog
- Shared – virtualized and shared resources
- Dynamic – flexible/agile globally integrated enterprise, cloud computing

|                     | 1997   | Today |
|---------------------|--------|-------|
| CIOs                | 128    | 1     |
| Host data centers   | 155    | 5     |
| Web hosting centers | 80     | 5     |
| Network             | 31     | 1     |
| Applications        | 15,000 | 4,800 |

## Project 'Big Green'

### Major proof point for Project Big Green

## **IBM'S PROJECT BIG GREEN SPURS GLOBAL SHIFT TO LINUX ON MAINFRAME**

ARMONK, NY, August 1, 2007

- § *IBM will consolidate and virtualize thousands of server images onto IBM System z™ mainframes*
- § *Substantial savings: energy, software and system support costs*
- § *80% less energy, 85% less floor space*
- § *Enabled by virtualization capability*

**Think what we could do for you**

# Enterprise Business Value

|  | <i>Expectations</i>  | <i>Benefits Realized</i>   | <i>Challenges</i>  |
|--|--|--|--|
|    | <p><b>Business Case:</b></p> <ul style="list-style-type: none"> <li>• Significant potential savings</li> <li>• Virtualization as a cross-IBM effort</li> </ul>                           | <ul style="list-style-type: none"> <li>• Savings in energy, space, software and systems support costs</li> </ul>                           | <ul style="list-style-type: none"> <li>§ Decision-Making: Business Unit versus Enterprise view</li> <li>§ Detailed internal business case</li> <li>§ Integrating project / program priorities</li> </ul>                                       |

## IBM System z Linux Virtualization Progress

IBM implementing New Enterprise Data Center through achievements in

- Server and storage virtualization
- Energy efficiency and resiliency improvements

Benefits are on track with expectations

- Migration management key
- Business case is compelling
- Using System z10 technology, the number of machines could be cut by about half, with greater savings in energy, floor space, software and support costs

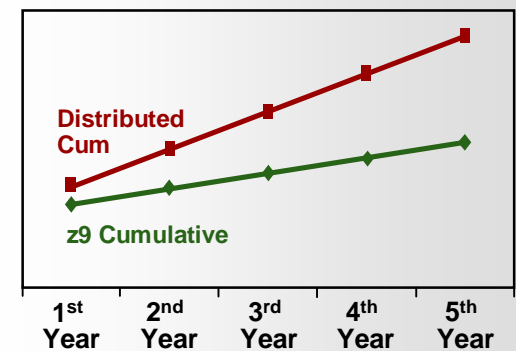

Lessons Learned, including:

- Enterprise strategy and sponsorship needed to drive business case and execution
- Compelling business imperative accelerates execution and drives support
- Enterprise view of migration managed by waves drives experience; savings for investment

IBM experience is driving Time to Value initiatives, integrated into IBM capabilities

- Dramatic reduction in labor through new processes supporting workload migrations
- Fall in/out analysis, working with business units, to close gaps in workload pipeline
- Piloting new testing strategy, processes & tools to automate

**Cumulative 5-Year Cost Comparison**

## Business Case Leveraged RACE Tool, Iterative Approach

### *Utilized RACE commercial modeling tool*

- Foundation for internal business case, constructed specific environmental variables

### *Created financial plan for “known universe”*

- Identified relevant sample (5-10%) of most likely servers to be migrated and gathered financial profile information for each

### *Engaged SME’s within IBM*

- Provided business case assumptions (i.e. depreciation/maintenance), modified as appropriate

### *Iterative Process*

- Continuously engaged with core SME’s to ensure most current information

### *Project Metrics*

- Weekly report of migrated servers and their disposition status (reuse or disposal using GARS\*) and Energy Certificate status
- Working to incorporate actuals into the Business Case such that we can refresh our assumptions

\*IBM Global Asset Recovery Services

# TCO: A Range of IT Cost Factors – Often Not Considered

- **Availability**
  - High availability
  - Hours of operation
- **Backup / Restore / Site Recovery**
  - Backup
  - Disaster Scenario
  - Restore
  - Effort for Complete Site Recovery
  - SAN effort
- **Infrastructure Cost**
  - Space
  - Power
  - Network Infrastructure
  - Storage Infrastructure
  - Initial Hardware Costs
  - Software Costs
  - Maintenance Costs
- **Additional development/implementation**
  - Investment for one platform – reproduction for others
- **Controlling and Accounting**
  - Analyzing the systems
  - Cost
- **Operations Effort**
  - Monitoring, Operating
  - Problem Determination
  - Server Management Tools
  - Integrated Server Management – Enterprise Wide
- **Security**
  - Authentication / Authorization
  - User Administration
  - Data Security
  - Server and OS Security
  - RACF vs. other solutions
- **Deployment and Support**
  - System Programming
    - Keeping consistent OS and SW Level
    - Database Effort
  - Middleware
    - SW Maintenance
    - SW Distribution (across firewall)
  - Application
    - Technology Upgrade
    - System Release change without interrupts
- **Operating Concept**
  - Development of an operating procedure
  - Feasibility of the developed procedure
  - Automation
- **Resource Utilization and Performance**
  - Mixed Workload / Batch
  - Resource Sharing
    - shared nothing vs. shared everything
  - Parallel Sysplex vs. Other Concepts
  - Response Time
  - Performance Management
  - Peak handling / scalability
- **Integration**
  - Integrated Functionality vs. Functionality to be implemented (possibly with 3rd party tools)
  - Balanced System
  - Integration of / into Standards
- **Further Availability Aspects**
  - Planned outages
  - Unplanned outages
  - Automated Take Over
  - Uninterrupted Take Over (especially for DB)
  - Workload Management across physical borders
  - Business continuity
  - Availability effects for other applications / projects
  - End User Service
  - End User Productivity
  - Virtualization
- **Skills and Resources**
  - Personnel Education
  - Availability of Resources

Routinely Assessed  
Cost Factors

## IBM System z Linux Virtualization Progress

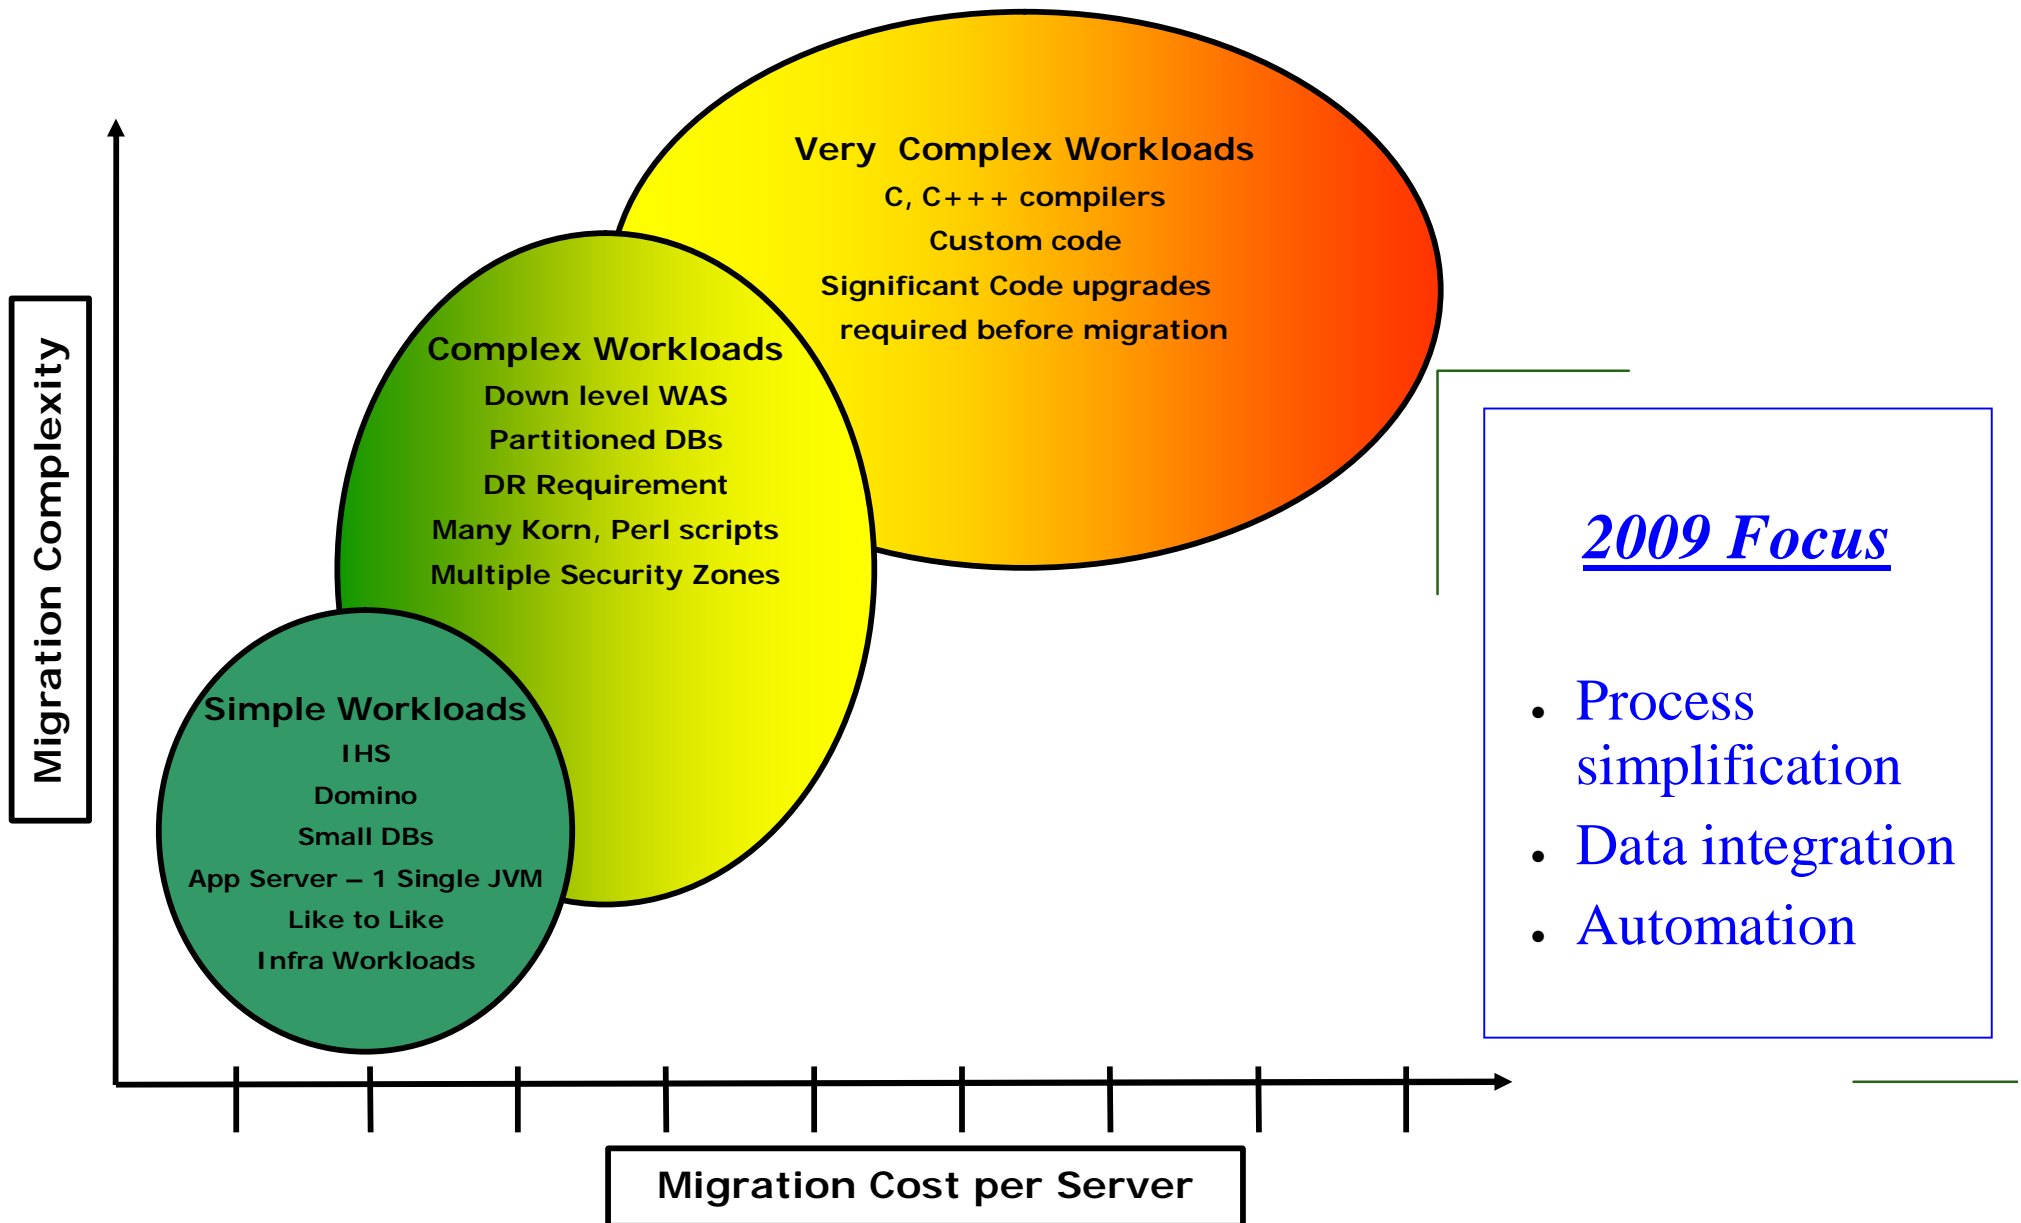

- § Established phased approach
- § Comprehensive project plan and management system
- § Benefits are on track with expectations
- § Technical solution, education plan and operational plan
- § IBM Time to Value initiatives, integrated into IBM capabilities
- § Highest level of support from IBM senior executive team
- § Increased focus on decommissioning to realize benefits

### 2009 Progress Update

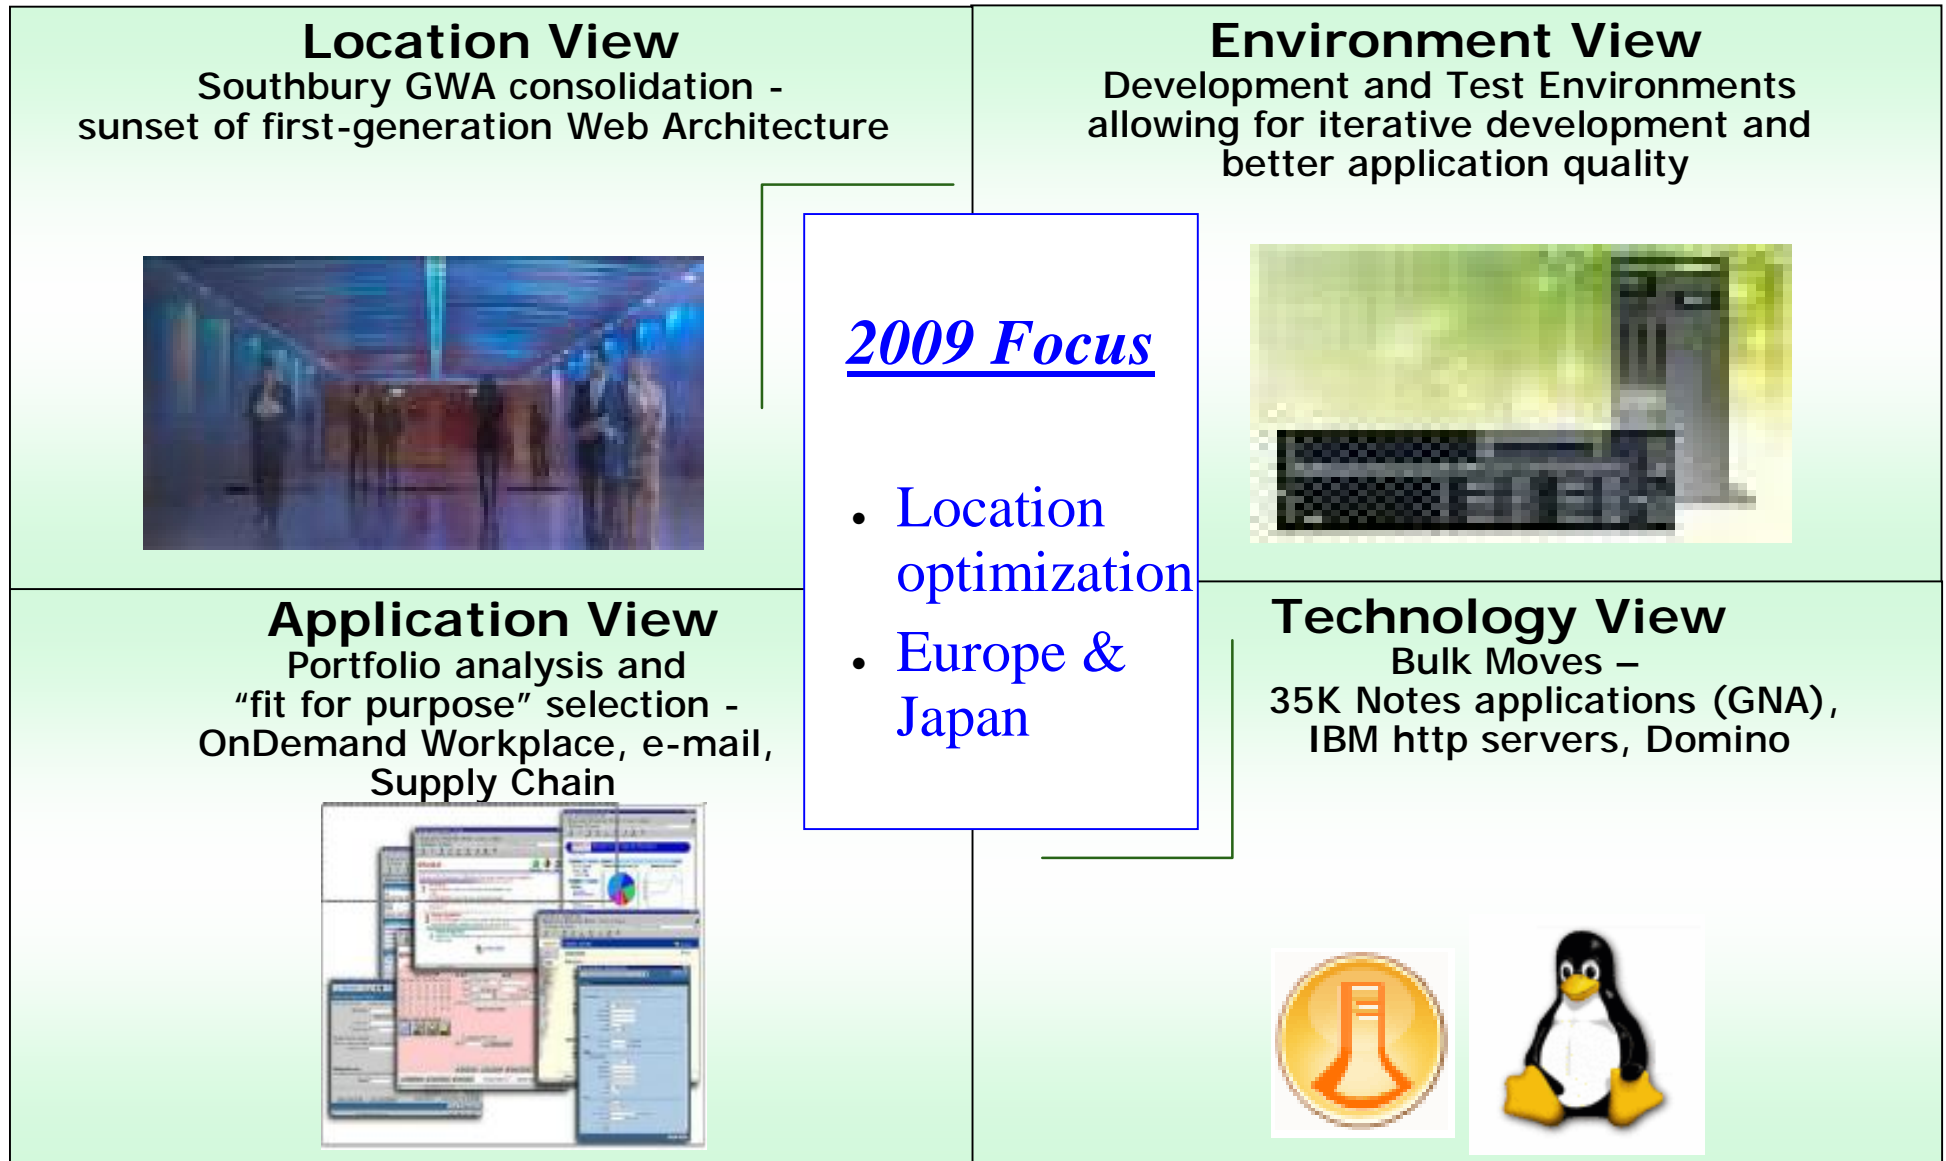

- Refined workload segmentation
- Integrated workload selection approach
- Expansion to Europe / Japan
- Business case validation
- Process improvement and automation
- Global BT/IT CIO organization
- Broadened optimization focus

# Workload Complexity is a Critical Variable Influencing Migration Costs

# An Enterprise Workload Selection Process Enables Migration Success

# Client View of TCO Comparison for Similar Distributed Workload vs. System z Linux results in Potential 60-75% Gross Cost Savings / 5 yrs

## Operating Cost: Distributed vs. Mainframe

## Potential Savings: Categories as a % of Gross Savings

\* HW Acquisition compares server/disk refresh of distributed environment to the cost of acquiring new mainframes/storage

## Validation Results

- *Updated*
  - Space checker boarding
  - Redundant servers
  - HW age / mix
  - LEAN labor efficiencies
  - Network port mix
- *Added*
  - Space reuse cost avoidance

Results will vary based on several factors including # of servers and work load types

## IBM is Using a 'Work in Process' Approach to Manage the Migration

### Management Approach and Reporting

- § Process approach borrowed from factory line management
- § Metrics for each process and sub-process
- § Quality measured with process fallout – tracked by cause
- § Daily status calls for issue resolution
- § Weekly status reporting for CIO and management team

**Weekly Pipeline Summary - Server Metrics**

**IBM ECM End to End Process**

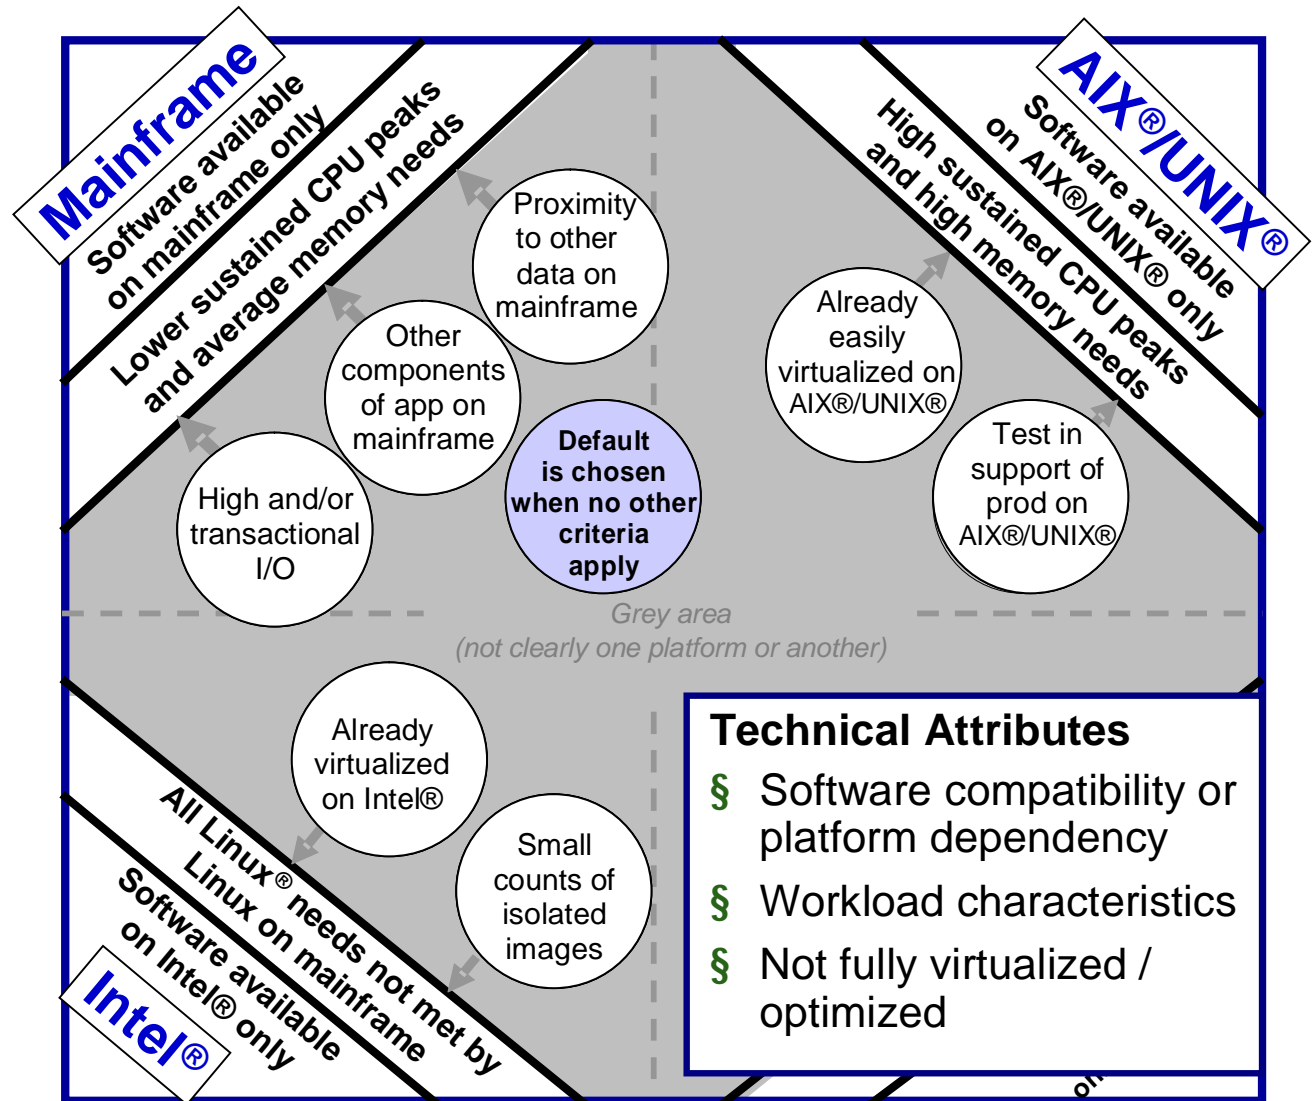

| Project Phase  | Server Inventory Verification | Server / Application Qualification | Migration Planning | Server / Application Migration | Post Production | Total Servers In Pipeline |
|----------------|-------------------------------|------------------------------------|--------------------|--------------------------------|-----------------|---------------------------|
| Ph 1: US       |                               |                                    |                    |                                |                 |                           |
| Ph 2: US       |                               |                                    |                    |                                |                 |                           |
| Ph 3: Americas |                               |                                    |                    |                                |                 |                           |
| Ph 4: Europe   |                               |                                    |                    |                                |                 |                           |
| Ph 5: AP/Japan |                               |                                    |                    |                                |                 |                           |
| Total          |                               |                                    |                    |                                |                 |                           |

|                     |         |       |         |                    |
|---------------------|---------|-------|---------|--------------------|
| Pipeline Management | Finance | Comms | Process | Technical Solution |
|---------------------|---------|-------|---------|--------------------|

## Each Workload is Evaluated for Suitability Based on Technical Attributes

Priority Workloads for Consolidation:

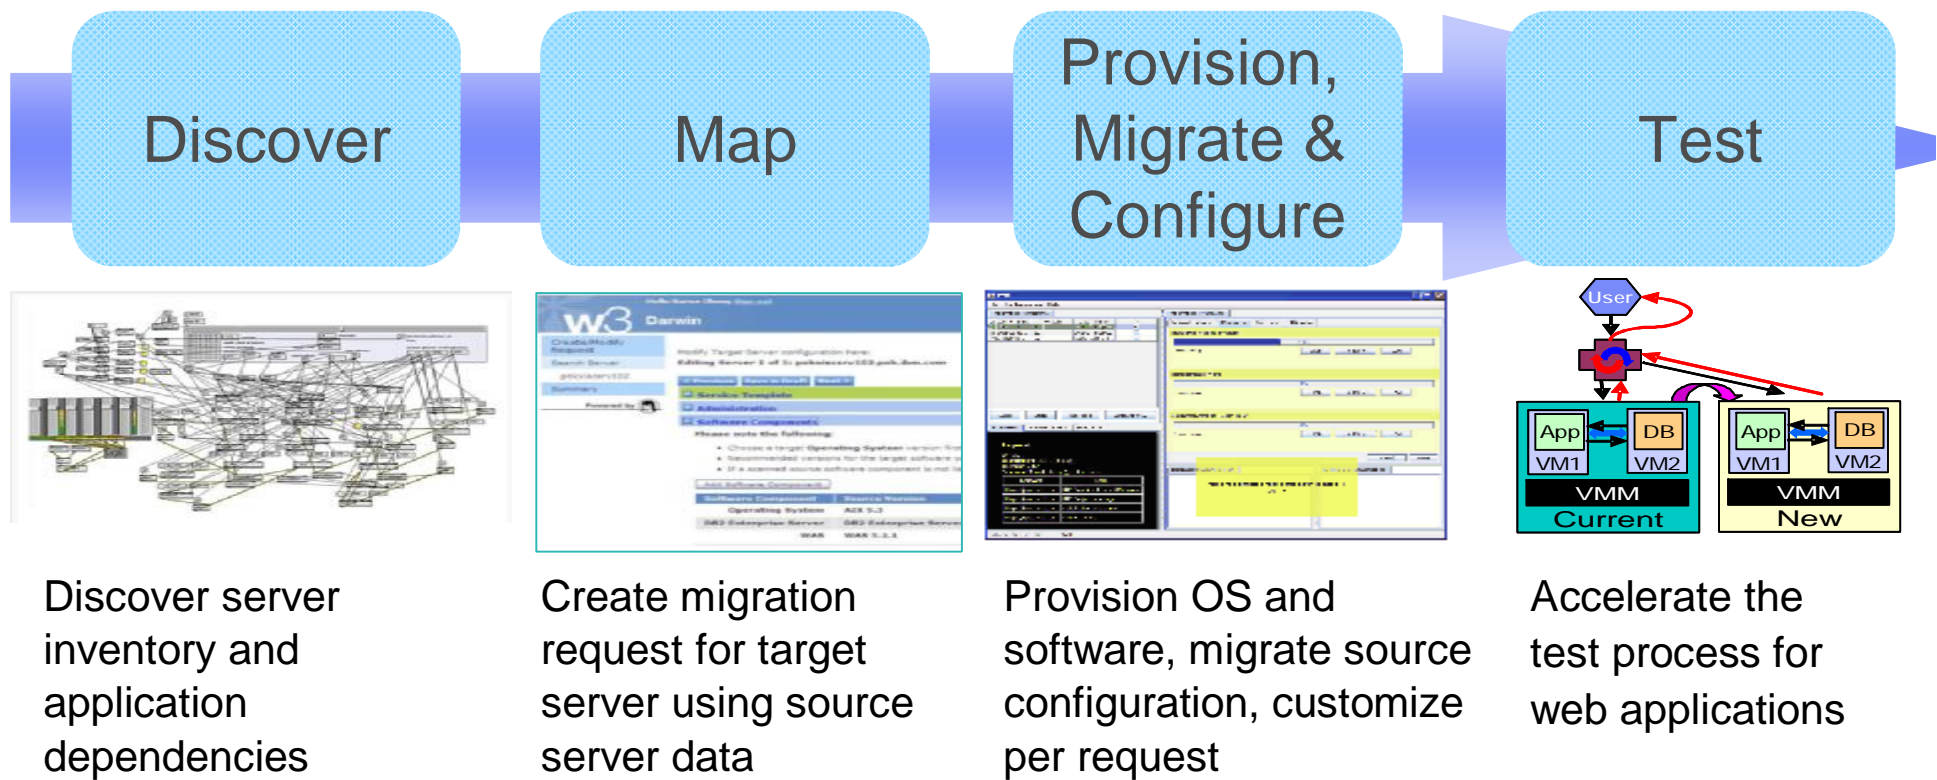

- **WebSphere® applications**
- **Domino® Applications**
- **Selected tools: Tivoli®, WebSphere® and internally developed**
- **WebSphere MQ**
- **DB2® Universal Database™**

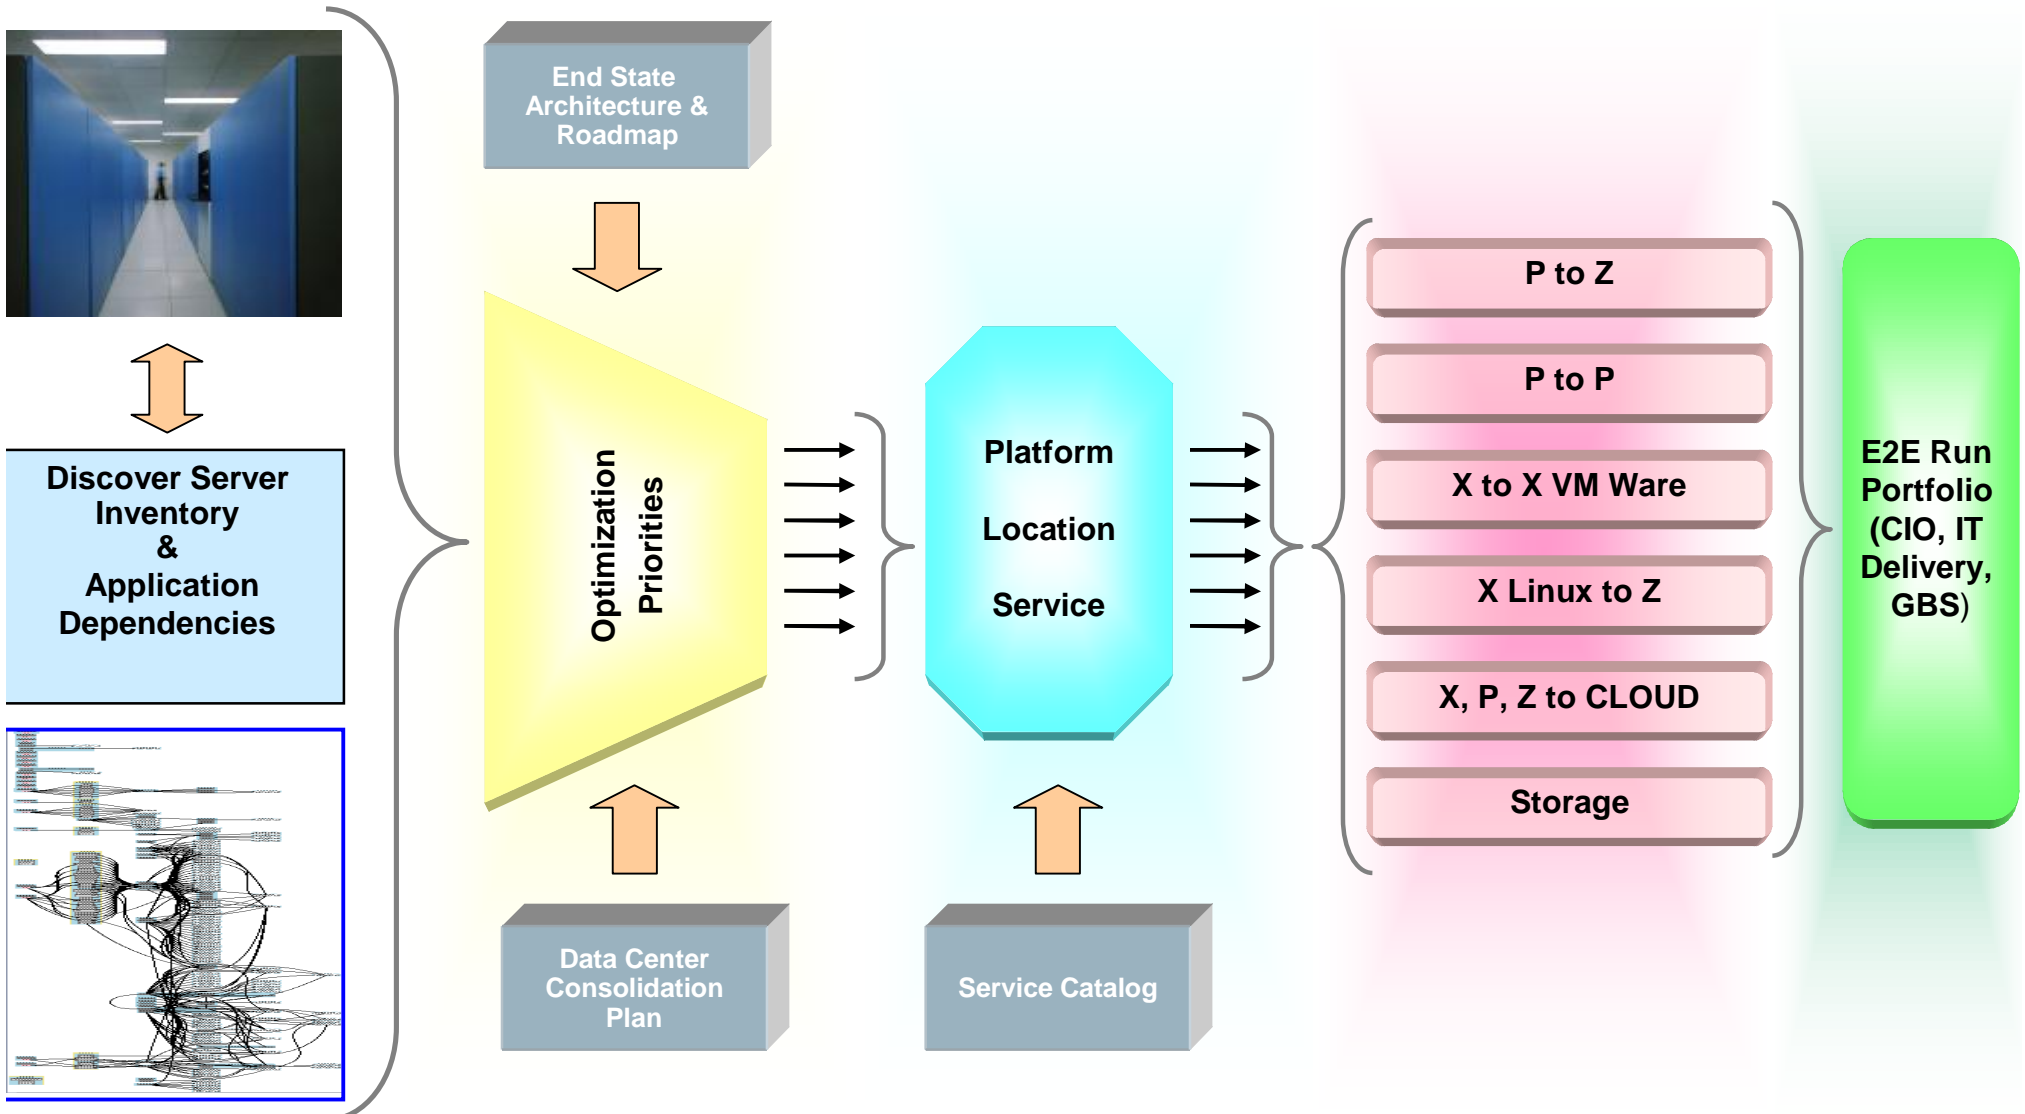

# Process Automation will Enable Migration Productivity Improvements

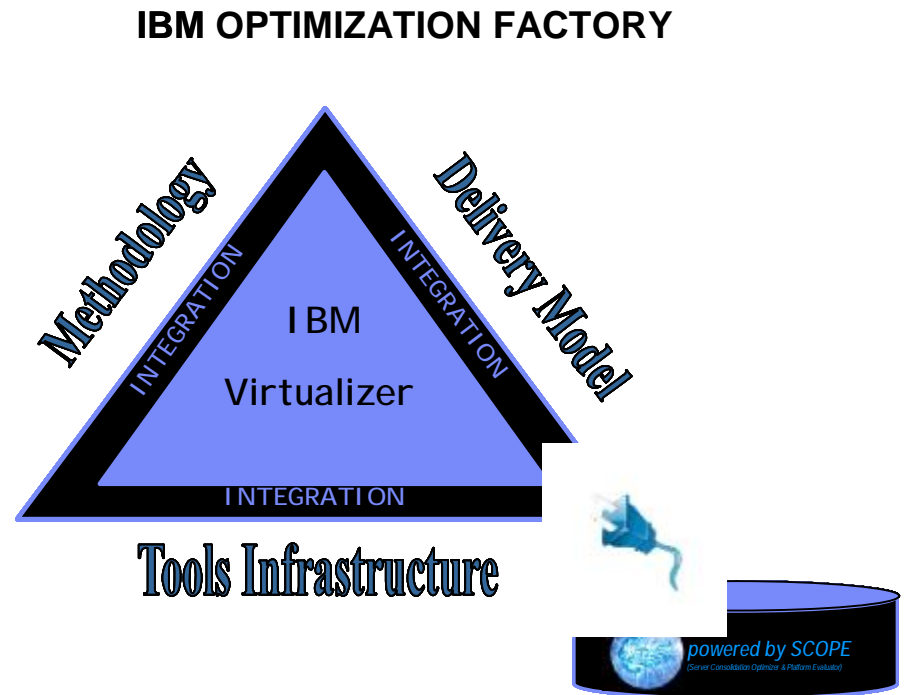

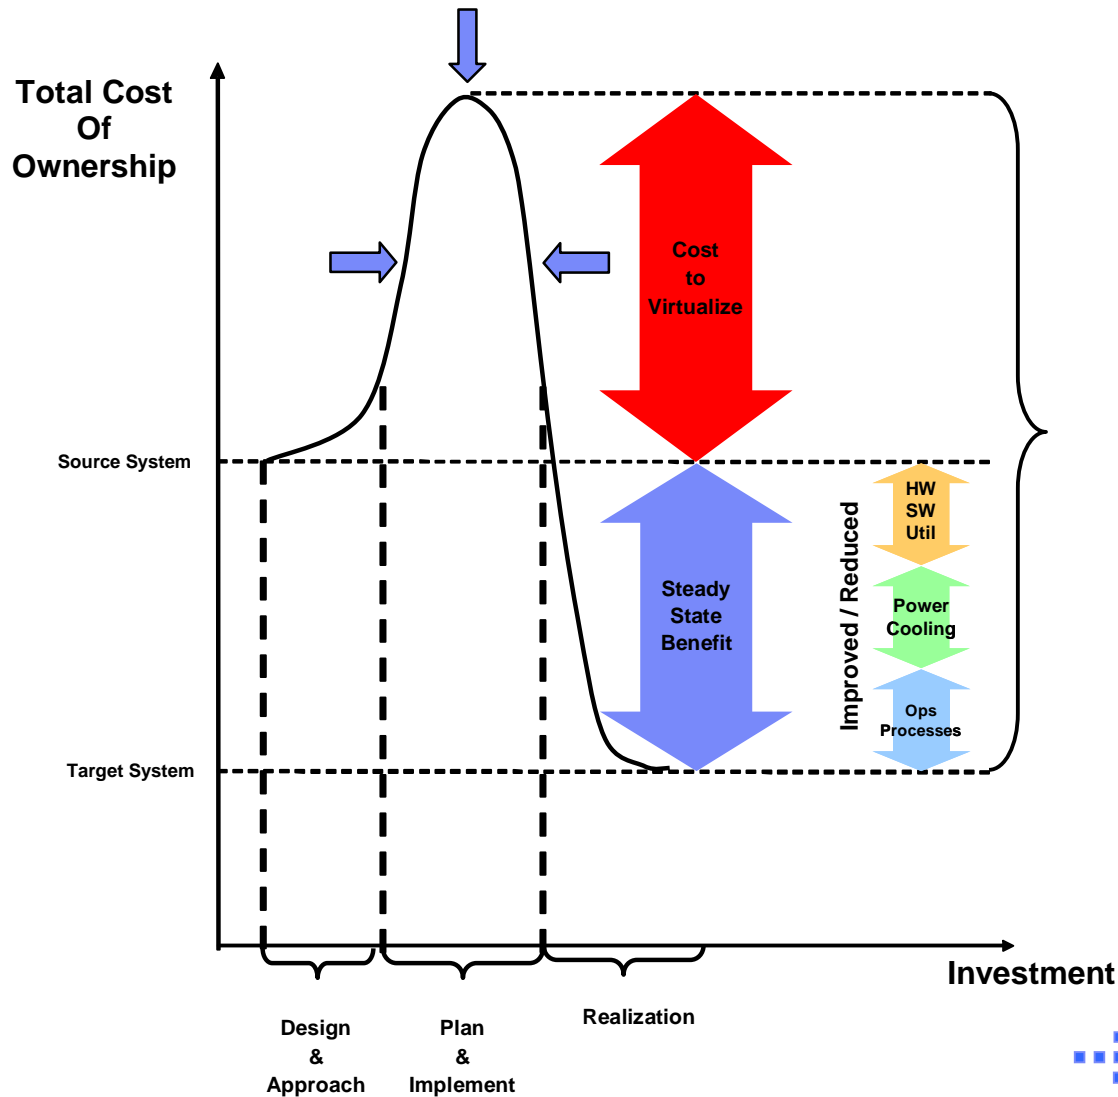

- § Application migration tools & services to replatform distributed applications to z Linux, and soon PowerVM
- § Tooling will discover, map, migrate, and test applications moving to z Linux
- § Improves time to value and accelerates ROI

# A Broadened Focus on IT Optimization will be Enabled by ECM

# The IBM Optimization Factory simultaneously reduces one-time costs while maximizing steady-state benefits of virtualization

*Leverage innovation & integration to consistently produce optimal virtualization designs with the least TCO for a given level of investment.*

The IBM Optimization Factory deploys this approach for System z Linux Consolidation and Migration Solution as two pre-packaged offerings

## 2 Scope Packages / Engagement Phases

### Design & Approach Services

Logical Level

### Planning & Implementation Services

Physical Level

#### Deliverables:

- . "As is" client environment
- . "To be" target architecture
- . High Level Solution Description
  - . Logical Level Ops Model
  - . Architecture Decisions Document
- . Business Case
- . High Level Transition Plan

#### Deliverables:

- . Physical Design (Micro level)
- . Implementation Plan

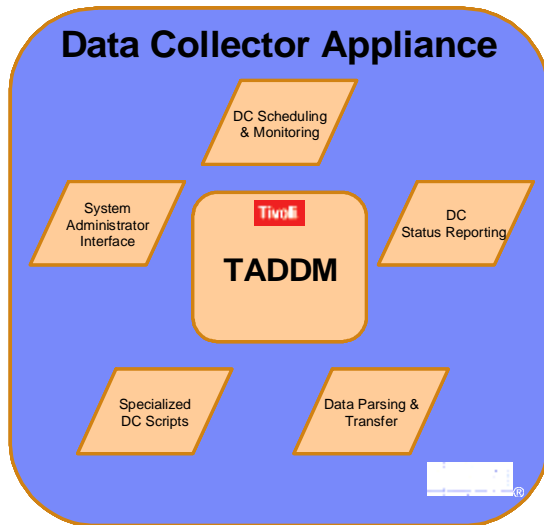

#### Execute:

- . Consolidated Environment
- . Application Migration

# IBM has a continuing tool development program to enhance data collection and reduce cycle times for migrations

## Data Discovery

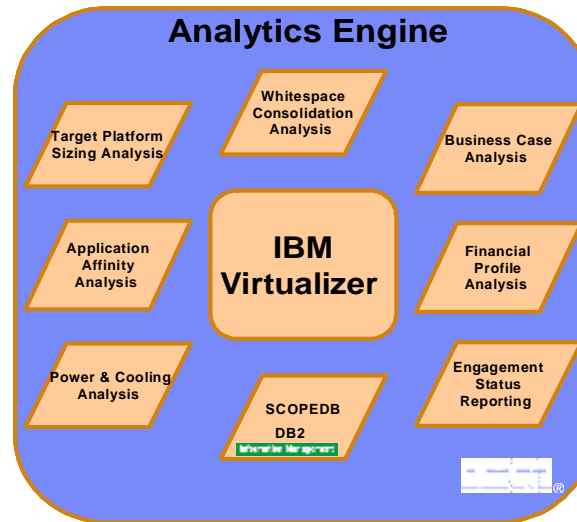

**Comprehensive-** self contained appliance that scans the environment for comprehensive server, application and configuration information

**Non-Invasive-** agentless data collection tools run with optimized data collection schedule & monitoring to minimize impact to your infrastructure

**Secure** – the secure interface for entering credentials allows system administrators retain control over sensitive information

**Streamlined-** Fast and efficient packaging of collected data for uploading to IBM's automated Analytics Engine

## Analysis

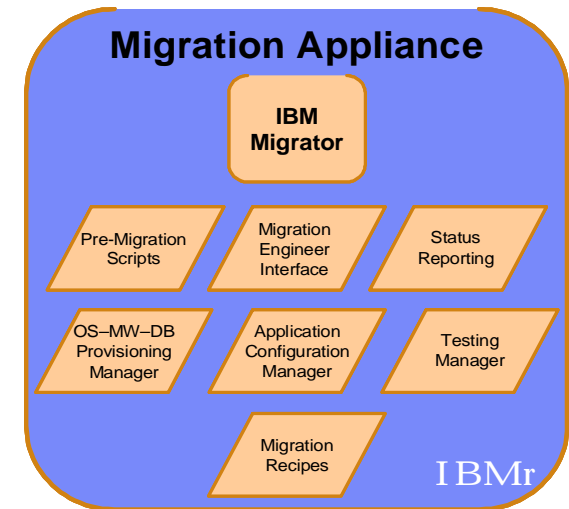

**Integrated whitespace** - consolidation function that analyzes opportunity to further consolidate remaining distributed workload

**Integrated Power/Cooling** – calculates energy savings using advanced power management techniques

**Comprehensive** – View of overall engagement progress and status and that reduces time and effort for weekly project status reports

**Financials** - business case features enables architecture decisions to be made optimally using both technical and financial factors

## Workload Migration

**Simplified-** specialized routines that simplify the collection of middleware, database, and application configuration data

**Controlled-** dynamic interface for controlling and directing application migrations

**Automated-** automated server, middleware, and database provisioning speed cycletime and ensure consistent results

**Proven-** fully tested and validated recipes for provisioning, configuring, and migrating a variety of middleware, database, and other software products

In addition to compelling savings, by virtualizing distributed workload onto System z Linux, ECM operational benefits are being realized

*From application owner perspective ...*

- § Speed: Rapidly clone environment - hours vs. days vs. weeks
- § On demand resources: Add system resources (memory, cpu) as needed
- § Scalable growth: I/O intensive workloads and cyclical applications
- § Enable new business models: Significantly reduced need for dedicated development and test servers

*From infrastructure owner perspective...*

- § System stability: Server reboot/recycling greatly reduced
- § Simplification: Less hardware and related features to manage
- § Improved change management: Significantly less security patches to apply
- § Increased agility: non-disruptive changes

## Energy Efficiency Certificates Deliver Savings

**By formally decommissioning servers, IBM is able to demonstrate energy savings and receive energy efficiency credits (EECs)**

### Client requirements

- Lower energy costs and achieve business benefit of Energy Efficiency
- Demonstrate Energy Efficiency Commitment

### Solution

- Virtualized workloads onto System z platform and reduced energy consumption
- Hundreds of servers in pipeline to be redeployed, sent to GARS\* and/or energy efficiency certificates issued
- IBM applied for EECs for eligible decommissioned servers to receive Energy Efficiency Credits
- GARS for asset reuse, recycling and/or reclamation

### Benefits

- Quantifiable energy reductions, tradable certificates
- Demonstrated commitment to energy efficiency

\*IBM Global Asset Recovery Services

### The Next Level in Green Energy Markets

#### What is an Energy Efficiency Credit?

A Neuwing EEC (Energy Efficiency Credit) is a measured & verified Megawatt Hour (MWh) of Energy Savings i.e., Energy Efficiency

EECs quantify, measure, verify, certify and monetize data center energy efficiency projects

November 2, 2007 Press Release

#### IBM Launches World's First Corporate-Led Energy Efficiency Certificate Program

*In Conjunction With Neuwing Energy, Program Will Provide Clients Documentation and Third-Party Verification of the Energy Saving Results of Their Projects. [Read more](#)*

## Decommission Process Overview

**Server available  
as a result of  
virtualization  
efforts**

**Server  
Ready**

**Check for technical viability and asset  
value to determine if h/w is a  
redeployment candidate**

*If redeployed*

**Request completed to  
coordinate shipping  
and update property  
control**

*If not redeployed*

**Complete Machine  
List Database and  
ship to GARS\***

**Apply to Neuwing for  
energy efficiency  
certificates**

**Tracking tool is updated to reflect  
disposition of the assets in the project**

**Capture savings in business plan and  
business case**

# Infrastructure Transformation – Lessons Learned

## Notes:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

All performance information was determined in a controlled environment. Actual results may vary. Performance information is provided "AS IS" and no warranties or guarantees are expressed or implied by IBM.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.

All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claim related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.
